These recommendations will be the basis for the development of a new model for the management of the environment in the region. The recommendations will be presented to the relevant government bodies for consideration.

- Phagocytosis and oxidative burst contribute to bactericidal activity against pathogenicity and phagocytosis. These include macrophages, neutrophils, and eosinophils. Adherent phagocytes allow longer phagocytosis with sufficient respiratory oxygen.
- Phagocytosis leads to an increase in bactericidal recruitment with their actions in lymphocyte response. NK cells are pathogenic without being activated directly while T cells are necessary.
- Complement proteins are grouped as second line phagocytosis and surface receptors. These proteins facilitate phagocytosis by phagocytes and also help destroy pathogens via pinocytosis and lytic phagocytosis.
- Endosomal pH^{7.0} is an environment necessary for maturing phagosomes to become acidic enough to destroy. Classical MHC-1 genes are responsible for this complex that contains cathepsins and proteases around MHC class.
- The phagocytosis response can be up regulated with cytokines that contain GM-CSF to promote the phagocytosis. These cytokines typically stimulate phagocytes in killing, tissue removal, and bone support roles. These cytokines include IL-1, IL-6, IL-8, IL-10, IL-12, IL-15, IL-16, IL-17, IL-18, IL-23, IL-27, TNF- α , and GM-CSF. These cytokines stimulate phagocytosis, endocytosis, killing, pinocytosis, and tissue destruction to ensure the health and functionality of the body.
- It is assumed that the up regulation of the immune system induced with these cytokines stimulates phagocytosis, oxidative stress, phagocytosis, phagosomes, and macrophages against pathogenic microorganisms. These cytokines stimulate immune system to combat against pathogenic microorganisms. These cytokines also stimulate phagocytosis induced by macrophages, which related with bactericidal mechanism disease fighting, phagocytosis, NK cell, and cytotoxic T cells.
- The infiltration application of NK cell mainly mediated by macrophages with other cytokines. Immune system targets for this macrophage action. This immune system
