*Learning & Knowledge* Robert McCormick, Carrie Paechter, 1999-03-23 This textbook is founded on the idea of learning as knowledge construction and the implications of this for the nature of knowledge and for the way it is acquired. The first section examines the nature of knowledge from several perspectives. The dominant theme is that views of learning closely relate to views of knowledge. The second section considers what it is to be knowledgeable. Expertise and types of knowledge are considered using examples from different phases of education and subject areas. The final part of the book focuses on learning within domains and what this means from different subject perspectives. Learning and Knowledge is a Course Reader for The Open University course E836 Learni

**Knowing Knowledge** George Siemens, 2006 Why does so much of our society look as it did in the past? Our schools, our government, our religious organizations, our media, while more complex, have maintained their general structure and shape. Classroom structure today, with the exception of a computer or an LCD projector, looks remarkably unchanged. Teacher at the front, students in rows. Our business processes are still built on theories and viewpoints that existed over a century ago, with periodic amendments from thinkers like Drucker. 2 In essence, we have transferred not transformed our physical identity to online spaces and structures

**Knowledge, Education and Learning** Lars Qvortrup, 2006 Present day society is often referred to as a knowledge society. But how can knowledge be defined and what role does it play along with the related or connected concepts of learning and media? ICT In what sense does learning lead to knowledge? What forms of learning are adequate in the so-called knowledge society and how are appropriate forms of learning underpinned? How should media be conceptualised and what is the role of the media, not least digital media, i.e. ICT, in society? Most people seem to agree that we live in a knowledge society. But what is knowledge and how can knowledge be categorised? How does learning and life long learning help us making knowledge society a reality and what is the role of e-learning? The book aims at answering all these basic questions. It provides a definition and logical categorisation of knowledge. It categorises learning and teaching in a similar system. It analyses media, education, media, socialisation and the use of digital media in and for teaching. It summarises the main theories of e-learning. And it presents the German sociologist Niklas Luhmann's theory of the educational system. The book is written for everybody who works professionally with education, knowledge and knowledge management, including educational researchers, e-learning specialists, teachers and students at teacher training colleges and for everybody interested in understanding the so-called knowledge society

Originally published in 1994 the aim of the authors was to provide a comprehensive introduction to recent advances in research which had been made in learning and teaching in the early years of schooling at the time Emphasis is placed on how subject knowledge is constructed or acquired and the organization of teaching to promote the learner s active construction of meaning through the integration of new knowledge with existing understanding The National Curriculum is founded in subject knowledge though little examination appears to have been made of this in terms of how subject matter is transformed into the content of teaching that young children can understand It this remains for the teacher to develop instruction through the creation of a curriculum content and sequence which both reflects and advances the structure of existing forms of representation problem solving and knowledge which the child brings to the school The whole thrust of the book challenges the conventional early years ideology with its emphasis on child centred concrete and empirical approaches to learning with a view of teaching which is concerned with making sense of children s understanding and allowing their active construction of knowledge and information processing to develop expertise in context **Knowledge: Its Creation, Distribution and**

Learning in Information-Rich Environments Delia Neuman,2014-08-23 The amount and range of information available to today s students and indeed to all learners is unprecedented Phrases like the information revolution the information or knowledge society and the knowledge economy underscore the truism that our society has been transformed by virtually instantaneous access to virtually unlimited information Thomas Friedman tells us that The World Is Flat and that we must devise new political and economic understandings based on the ceaseless communication of information from all corners of the world The Bush administration tells us that information relating to the war on terrorism is so critical that we must allow new kinds of surveillance to keep society safe Teenage subscribers to social computing networks not only access information but enter text and video images and publish them widely becoming the first adolescents in history to be creators as well as consumers of vast quantities of information If the characteristics of the information age demand new conceptions of commerce national security and publishing among other things it is logical to assume that they carry implications for education as well In fact a good deal has been written over the last several decades about how education as a whole must transform its structure and curriculum to accommodate the possibilities offered by new technologies Far less has been written however about how the specific affordances of these technologies and the kinds of information they allow students to access and create relate to the central purpose of education learning What does learning mean in an information rich environment What are its characteristics What kinds of tasks should it involve What concepts strategies attitudes and skills do educators and students need to master if they are to learn effectively and efficiently in such an environment How can researchers theorists and practitioners foster the well founded and widespread development of such key elements of the learning process This book explores these questions and suggests some tentative answers Drawing from research and theory in three distinct but related fields learning theory instructional systems design and information studies it presents a way to think about learning that responds directly to the actualities of a world brimming with information The book is grounded in the work of such key figures in learning theory as Bransford and Anderson Krathwohl It draws on such theorists of instructional design as Gagne Mayer and Merrill From information studies it uses ideas from Buckland Marchionini and Wilson who is known for his pioneering work in information behavior that is the full range of information seeking and use The book breaks new ground in bringing together ideas that have run in parallel for years but whose relationship has not been fully explored Strategies of Research on Learning in Educational Settings Philip Hunter DuBois,King M.
