*Early Colleges as a Model for Schooling* Julie A. Edmunds, Fatih Unlu, Elizabeth J. Glennie, Nina Arshavsky, 2022-08-16  
Early Colleges as a Model for Schooling advocates for early college high schools as an effective means of reducing academic cultural and financial obstacles to postsecondary education. This perceptive work evaluates both quantitatively and qualitatively the impacts of early colleges hybrids that blend elements of secondary and postsecondary education. It examines the strengths and challenges of early college models of different designs and explores their place in the greater education system. Julie A. Edmunds, Fatih Unlu, Elizabeth J. Glennie, and Nina Arshavsky craft their narrative around the findings of one of the most ambitious studies to date on early college high schools a fifteen year longitudinal study involving more than four thousand students across nineteen secondary schools that have adopted the model. They offer insight into the student experience within early college high schools and beyond. The authors demonstrate how the well structured and supportive educational environment of early college not only prepares students academically for college level coursework but also helps students navigate logistical challenges in applying for colleges and universities. They show how the positive outcomes of the early college experience can help tip the balance toward successful postsecondary educational experiences especially for historically underserved students such as low income students, minority students, and first generation college students. As the authors point out a shift in the way the transition between secondary and postsecondary education is implemented provides an achievable approach to improving college readiness and lowering educational barriers. They argue persuasively that wider adoption of this educational model in high schools has great potential to improve overall access to higher education.

**The American Psychiatric Association Publishing Textbook of Psychopharmacology, Sixth Edition** Alan F. Schatzberg, M.D., Charles B. Nemeroff, M.D., Ph.D., 2024-03-22  
More than 160 authors including more than 75 new contributors lent their expertise to this sixth edition of The American Psychiatric Association Publishing Textbook of Psychopharmacology. Featuring 12 all new chapters and fully aligned with the revised DSM 5 TR classification this two volume text offers an unrivaled in depth look at the rapidly evolving field of neuropsychopharmacology. The opening chapters provide a whirlwind tour of the multiple disciplines that undergird the chapters to come with topics extending from the principles of molecular biology and genomics to the rudiments of neuroimaging and personalized medicine in psychiatry. The main body of the Textbook features an examination of the medication classes that form the basis of psychopharmacological treatment. For each drug within a class data are reviewed on history and discovery, preclinical and clinical pharmacology, pharmacokinetic parameters, mechanism of action, indications and efficacy, side effects and toxicology, and drug-drug interactions. The Textbook's second volume focuses on psychopharmacological approaches to treatment of patients with major psychiatric disorders e.g. mood and anxiety disorders, schizophrenia, substance use disorders, as well as patients in specific populations e.g. adults with ADHD, pediatric patients. For each specific condition, patient population or setting chapters provide guidance on topics such as

medication selection combination and maintenance dosing regimens side effect monitoring and management and optimization of treatment response Closing this volume is an Appendix of Psychiatric Medications with key information on each of the agents covered in the Textbook presented in a convenient tabular format Noteworthy additions to this textbook include chapters addressing the following topics The potential roles of personalized medicine in psychiatry and of artificial intelligence and machine learning in psychopharmacology New medications with novel pharmacological mechanisms including the neurosteroid antidepressant brexanolone and the atypical antipsychotic pimavanserin Use of investigational agents such as psychedelics in psychiatric treatment Treatment of alcohol use disorder PTSD OCD and autism spectrum disorder Treatment of ADHD in adults Treatment of women in all life phases including during pregnancy and the postpartum period Treatment of individuals with intellectual developmental disorder With a level of detail not found in any other source this new edition of The American Psychiatric Association Publishing Textbook of Psychopharmacology illuminates the path to effective evidence based practice of psychopharmacology for novice and seasoned clinicians alike
