Thomas Seebohm on the Foundations of the Sciences Thomas Nenon, 2020-02-03 This book explores the work of Thomas Seebohm 1934 2014 a leading phenomenologist and hermeneuticist It features papers that offer a critical and constructive dialogue about Seebohm's analyses and their implications for the sciences The net result is an in depth study and a helpful overview of Seebohm's general approach and his specific views on various areas of modern science The contributors focus especially upon his final text History as a Science and the System of the Sciences They view this as the culmination and summary of his historical and phenomenological investigations into the foundations nature and limits of modern sciences This includes not just history but the Geisteswissenschaften more generally along with the social and natural sciences as well The essays in this volume reflect that range This volume presents insightful discussions about the nature and legitimacy of the human sciences as sciences and the unique character of the social sciences It will be of interest not just as a matter of historical scholarship but also and above all as an important contribution to phenomenology and to the philosophy of science and the sciences as such It deserves attention by scholars from any philosophical tradition interested in thinking about the foundations of their disciplines and a philosophy of science that includes but is not limited to the natural sciences

Logic and Logical Philosophy, 2003 *The Universe of General Relativity* A.J. Kox, Jean Eisenstaedt, 2006-09-10 A century ago in 1905 Albert Einstein published On the Electrodynamics of Moving Bodies in which the foundations were laid for the Special Theory of Relativity Ten years later his relativistic theory of gravitation and the General Theory of Relativity appeared Fifty years ago Einstein passed away in Princeton In the 1980s John Stachel then Editor of the Collected Papers of Albert Einstein brought together a group of historians philosophers physicists and mathematicians who had one thing in common a lively interest in the history and foundations of the theories of relativity At a meeting in 1986 at Osgood Hill this group met for the first time to discuss the prehistory development reception and other aspects of relativity It was the beginning of a valuable tradition Since then every three or four years a meeting has been organized during which historical and foundational issues in general and special relativity have been discussed Osgood Hill was followed by Luminy in 1988 Then came Johnstown 1991 Berlin 1995 Notre Dame 1999 and finally Amsterdam 2002 the proceedings of which are presented in this volume supplemented with some papers from the preceding meeting Once again these articles clearly show that an historical approach can lead to new insights into the development and elaboration of relativity The prehistory of special relativity and an early attempt at a relativistic theory of gravitation are covered in part by John Stachel and Shaul Katzir respectively [Time Now: The True Nature of Reality](#) Colin Gillespie, 2025-09-16 Time Now will change the way you think about reality Physicist and author Colin Gillespie brings together centuries of ancient thought and modern insights to unearth what is real and what is not He tells the story of our universe from the very beginning before the Big Bang and reveals to us a whole new view of time Gillespie writes with humor and gives deft explanations of complex concepts He helps

us find the inner truths about the universe and about ourselves And he does it in a way that is accessible inspiring and entertaining

Laws of Nature and Chances Barry Loewer, 2024-06-25 Barry Loewer presents a novel account of the metaphysics of law of nature chances fundamental ontology and the space time arena they occupy He calls this the Package Deal Account This aims to answer Stephen Hawking's question What is it that breathes fire into the equations and makes a universe for them to describe Loewer's account stands on the shoulders of David Lewis's Humean Best Systems Account of laws and chances but rejects Lewis Humean ontology of natural properties and instead lets the criteria that physicists employ for evaluating candidate fundamental theories of everything together with reality determine the universe's fundamental ontology The Package Deal Account thus advances the project of naturalizing metaphysics Loewer discusses the history of the concept of laws of nature current philosophical accounts of the metaphysics of laws and arguments for and against each of these He then shows how the Package Deal Account overcomes objections to each and how unlike Lewis's Humean account and its non Humean rivals it is able to accommodate recent developments in physics including proposals for theories of quantum gravity that reject the fundamentality of space time Loewer provides in addition an account of the laws and chances that occur in non fundamental special sciences and how they are related to those of fundamental physics **Boston Studies in the Philosophy of Science**, 2003

The Ontology of Science John Worrall, 1994 In this work the problem of scientific ontology is applied to the general issue of scientific realism In addition particular ontological issues raised by particular theories or fields are explored

The Foundations of Spacetime Physics Antonio Vassallo, 2022-09-30 This book provides an up to date overview of the foundations of spacetime physics It features original essays written by world class experts in the physics and philosophy of spacetime The foundational questions regarding the origin and nature of spacetime are branching into new and exciting directions These questions are not restricted to the quantum gravity program but also arise in the context of a well established theory like general relativity Against the background of these quick and diverse developments this volume features a broad range of perspectives on spacetime Part I focuses on the nature of spacetime in non quantum theories such as Newtonian mechanics and relativity Part II explores some intriguing conceptual implications of developing a quantum theory of spacetime The Foundations of Spacetime Physics is an essential resource for scholars and advanced students working in philosophy of physics philosophy of science and scientific metaphysics

Explanations John Cornwell, 2004-04-22 Our lives states of health relationships behaviour experiences of the natural world and the technologies that shape our contemporary existence are subject to a superfluity of competing multi faceted and sometimes incompatible explanations Widespread confusion about the nature of explanation and its scope and limits pervades popular exposition of the natural sciences popular history and philosophy of science This fascinating and intriguing book explores the way explanations work why they vary between disciplines periods and cultures and whether they have any necessary boundaries In other words Explanations aims to achieve a better understanding of explanation both within the sciences and the

humanities It features contributions from expert writers from a wide range of disciplines including science philosophy mathematics and social anthropology The Review of Metaphysics ,1998 Formal Ontology in Information Systems Boyan Brodaric,Fabian Neuhaus,2020-11-15 FOIS is the flagship conference of the International Association for Ontology and its Applications a non profit organization which promotes interdisciplinary research and international collaboration at the intersection of philosophical ontology linguistics logic cognitive science and computer science as well as in the applications of ontological analysis to conceptual modeling knowledge engineering knowledge management information systems development library and information science scientific research and semantic technologies in general This volume presents the 17 papers accepted for the 11th Formal Ontology in Information Systems conference FOIS 2020 These papers cover a broad range of topics and are organized into 5 groups Foundations is dedicated to the general ontological decisions providing a foundation for any ontology both from a philosophical perspective and with an emphasis on applications Social Entities is dedicated to the ontological analysis and formalization of various social entities including secrets legal theories decisions kinship and cultural heritage The papers in Intentionality and Embodiment analyze aspects of an agent s intentions beliefs and desires as well as the embodiment of functional relations The section on Parts and Wholes is dedicated to mereology as well as the mereological analysis of certain types of entities e g pluralities information entities and computer programs Lastly the papers in Methods are about ontology evaluation and use Altogether the papers reflect traditional FOIS themes with perhaps a greater emphasis on social and agent aspects and will be of interest to all those whose work involves ontology and its applications

The Concept of Object as the Foundation of Physics Irving Stein,1996 The concept of a classical object is analyzed and found to be deterministic In order to remove inconsistencies the object is taken as a classical random walk Although such a definition leads to the theory of special relativity it too is found to be inconsistent Its resolution eventually leads first to the Schroedinger and then to the Dirac equation In the end it is found that the concept of the object itself without interaction cannot be the basic ontology of physics **Physics, Uspekhi** ,2000 Scientific Perspectives on Divine Action Robert J. Russell,2008 Scientific Perspectives on Divine Action is a collection of essays assessing the series of the same name which advances the engagement of constructive theology with the natural sciences **Physics, Philosophy, and Theology** Robert J. Russell,William R. Stoeger,George V. Coyne,1988 It89 Includes bibliographical references and index

The Philosophy of Niels Bohr Henry J. Folse,1985 Of all the developments in twentieth century physics none has given rise to more heated debates than the changes in our understanding of science precipitated by the quantum revolution In this revolution Niels Bohr s dramatically non classical theory of the atom proved to be the springboard from which the new atomic physics drew it s momentum Furthermore Bohr s contribution was crucial not only because his interpretation of quantum mechanics became the most widely accepted view but also because in his role as educator and spokesman for atomic physics Bohr was very much the patron spirit of the entire quantum revolution The conceptual framework which he

proposed to provide a new viewpoint for understanding the quantum theoretical description of atomic systems became for most of this century the dominant outlook of countless productive experimental and theoretical physicists He called this new framework complementarity

Complexity and Analysis Stewart Umphrey, 2002 Wherever we look we notice complexity Philosophically the concept constitutes a tangled web of problems in theory as well as daily life Complexity and Analysis is a meticulous rendering of these problems tackling the seldom considered nature of complexity that confronts ontological analysts and holists alike Stewart Umphrey expertly describes the limits of analysis as they have come to light within mathematics the natural sciences and analytic philosophy explaining how Aristotle came upon and sought to move beyond the limits of ontological analysis In trying to understand any complex entity Umphrey argues one succeeds in meeting the criterion of metaphysical adequacy only if one fails to meet the criterion of epistemological adequacy Ranging across an array of subjects including Kantian and Hegelian idealism this book provides a superb account of how our own complexity presents not only theoretical problems but ethical and political dilemmas of great practical significance

The Ontology of Spacetime, 2006-07-10 This book contains selected papers from the First International Conference on the Ontology of Spacetime Its fourteen chapters address two main questions first what is the current status of the substantivalism relationalism debate and second what about the prospects of presentism and becoming within present day physics and its philosophy The overall tenor of the four chapters of the book's first part is that the prospects of spacetime substantivalism are bleak although different possible positions remain with respect to the ontological status of spacetime Part II and Part III of the book are devoted to presentism eternalism and becoming from two different perspectives In the six chapters of Part II it is argued in different ways that relativity theory does not have essential consequences for these issues It certainly is true that the structure of time is different according to relativity theory from the one in classical theory But that does not mean that a decision is forced between presentism and eternalism or that becoming has proved to be an impossible concept It may even be asked whether presentism and eternalism really offer different ontological perspectives at all The writers of the last four chapters in Part III disagree They argue that relativity theory is incompatible with becoming and presentism Several of them come up with proposals to go beyond relativity in order to restore the prospects of presentism Space and time in present day physics and philosophy Introduction from scratch of the debates surrounding time Broad spectrum of approaches coherently represented
