I. Computer won't turn on

Solutions:

1. Check the power supply

- If it's a desktop, is the old power supply still there? A desktop that had completely stopped all of a sudden, the first thing to check/try doing is to see if power is still coming from the power supply. It could mean the power supply is faulty, or, if you're using a different charger, if that charger has a power indicator, check whether it lights up when you plug it in.
- If your PC is a desktop computer and power's still not coming, it's not the plug socket or fault by plugging it into a different socket. If that doesn't work, it could be that the power supply is not the PC's type.
