Segunda edición de esta obra que estudia la anatomía, fisiología y teorías más relevantes para el tratamiento manual del dolor crónico y sus disfunciones, especialmente el dolor relativo a los tejidos suaves de la parte superior del cuerpo superior. El autor aborda por partes la mitad superior del cuerpo, cada sección se inicia con una anamnesis de la anatomía regional y la biomecánica, y una lista de los músculos en los cuales suelen encontrarse puntos gatillo. Cada técnica manual es descrita con detalle y viene acompañada por ilustraciones anatómicas claras con leyendas apropiadas y pertinentes. Además de describir dónde se encuentra y de qué modo las técnicas neuromusculares son incorporadas en el proceso de tratamiento de todos los músculos de la parte superior del cuerpo, la obra comienza con una visión panorámica de la anatomía y la función del tejido conjuntivo, la fascia, los músculos y los sistemas nerviosos periférico y central. Junto con las secciones de aplicación práctica, una serie de capítulos esbozan un amplio panorama sobre muchas de las hipótesis actuales e investigaciones en torno a las causas de la disfunción musculoesquelética y los diversos tipos de presentación, proporcionando soluciones y recomendaciones en capítulos ulteriores. Asimismo, se describen extensamente los conceptos y teorías actuales y la evidencia relativa a las causas, efectos y formas de presentación clínica de los puntos miofasciales. La aparición de un texto que integre la aplicación segura y exacta de algunas de las técnicas más eficaces en el tratamiento de tejidos blandos es tan oportuna como necesaria.
