Digital Transformation Birgit Vogel-Heuser, Manuel Wimmer, 2023-02-02 Digital Transformation in Industry 4.0/5.0 requires the effective and efficient application of digitalization technologies in the area of production systems. This book elaborates on concepts, techniques, and technologies from computer science in the context of Industry 4.0/5.0 and demonstrates their possible applications. Thus, the book serves as an orientation but also as a reference work for experts in the field of Industry 4.0/5.0 to successfully advance digitization in their companies. *Human-Computer Interaction*.

Interacting in Various Application Domains Julie A. Jacko, 2009-07-24 The 13th International Conference on Human Computer Interaction (HCI International 2009) was held in San Diego, California, USA, July 19-24, 2009, jointly with the Symposium on Human Interface Japan 2009, the 8th International Conference on Engineering Psychology and Cognitive Ergonomics, the 5th International Conference on Universal Access in Human Computer Interaction, the Third International Conference on Virtual and Mixed Reality, the Third International Conference on Internationalization, Design and Global Development, the Third International Conference on Online Communities and Social Computing, the 5th International Conference on Advanced Cognition, the Second International Conference on Digital Human Modeling, and the First International Conference on Human Centered Design. A total of 4,348 individuals from academia, research institutes, industry, and governmental agencies from 73 countries submitted contributions, and 1,397 papers that were judged to be of high scientific quality were included in the program. These papers dress the latest research and development efforts and highlight the human aspects of the design and use of computing systems. The papers accepted for presentation thoroughly cover the entire field of human computer interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas.

[Globalizing Domain-Specific Languages](#) Benoit Combemale, Betty H.C. Cheng, Robert B. France, Jean-Marc Jézéquel, Bernhard Rumpe, 2015 The development of modern, complex software intensive systems often involves the use of multiple DSMLs that capture different system aspects. Supporting coordinated use of DSMLs leads to what we call the globalization of modeling languages, that is, the use of multiple modeling languages to support coordinated development of diverse aspects of a system. In this book, a number of articles describe the vision and the way globalized DSMLs currently assist integrated DSML support teams working on systems that span many domains and concerns to determine how their work on a particular aspect influences work on other aspects. Globalized DSMLs offer support for communicating relevant information and for coordinating development activities and associated technologies within and across teams. In addition to providing support for imposing control over development artifacts produced by multiple teams, DSMLs can be used to support socio-technical coordination by providing the means for stakeholders to bridge the gap between how they perceive a problem and its solution and the programming technologies used to implement a solution. They also support coordination of work across multiple teams. DSMLs developed in an independent manner to meet the specific needs of domain experts have an

associated framework that regulates interactions needed to support collaboration and work coordination across different system domains. The articles in the book describe how multiple heterogeneous modeling languages or DSMLs can be related to determine how different aspects of a system influence each other. The book includes a research roadmap that broadens the current DSML research focus beyond the development of independent DSMLs to one that provides support for globalized DSMLs.

Domain-Specific Languages in Practice Antonio Buccharone, Antonio Cicchetti, Federico Ciccozzi, Alfonso Pierantonio, 2021-06-24. This book covers several topics related to domain specific language DSL engineering in general and how they can be handled by means of the JetBrains Meta Programming System MPS an open source language workbench developed by JetBrains over the last 15 years. The book begins with an overview of the domain of language workbenches which provides perspectives and motivations underpinning the creation of MPS. Moreover technical details of the language underneath MPS together with the definition of the tool's main features are discussed. The remaining ten chapters are then organized in three parts each dedicated to a specific aspect of the topic. Part I MPS in Industrial Applications deals with the challenges and inadequacies of general purpose languages used in companies as opposed to the reasons why DSLs are essential together with their benefits and efficiency and summarizes lessons learnt by using MPS. Part II about MPS in Research Projects covers the benefits of text based languages the design and development of gamification applications and research fields with generally low expertise in language engineering. Eventually Part III focuses on Teaching and Learning with MPS by discussing the organization of both commercial and academic courses on MPS. MPS is used to implement languages for real world use. Its distinguishing feature is projectional editing which supports practically unlimited language extension and composition possibilities as well as a flexible mix of a wide range of textual, tabular, mathematical and graphical notations. The number and diversity of the presented use cases demonstrate the strength and malleability of the DSLs defined using MPS. The selected contributions represent the current state of the art and practice in using JetBrains MPS to implement languages for real world applications.

ANGL S High Performance Computing HPC relies completely

on complex parallel heterogeneous architectures and distributed systems which are hard and error prone to exploit even for HPC specialists. Further and further knowledge on runtime systems dependency tracking, memory transaction optimization and many other techniques are a must have requirement to produce high quality software capable of exploiting every single bit of power an HPC system has to offer. On the other hand domain experts like geologists or biologists are usually not technology aware enough to produce the best software for these complex systems. Nowadays the only way to successfully exploit an HPC system requires that computer and domain experts work closely towards producing applications to solve domain problems. Domain experts have the knowledge on the domain algorithms while computer experts know how to efficiently map these algorithms on HPC systems. This project proposes a framework that eases most of the processes related to the production of Domain Specific Languages (DSLs) that run on top of accelerator based heterogeneous architectures. By using DSLs domain experts can develop their applications using their own high level language focusing only on their hard enough issues. Meanwhile computer experts stay only improving the implementation of these DSLs to make the most out of an HPC platform. This way we keep each expert focused as much as possible on its natural domain of expertise.
