Petrophysics , 2008 Dynamic Structures in an Open Cosmos Mathias Hübner, 2021-12-01 The restoration of the Pontifical Academy of Sciences served to reconcile science with faith In other words physics should be made subservient to faith The spiritual shepherd nourishes his sheep using paradoxes For example the immaculate conception served for centuries But this belief isn't time relevant anymore Better is a belief based on mathematics Modern physics is characterized by a number of paradoxes that can be traced back to the incorrect use of mathematical means of expression in a closed system Now out of concern for the common house Pope Francis has released the connection to a closed theory with the groundbreaking sentence In this universe made up of open systems that communicate with one another we can discover innumerable forms of relationship and participation Now we are any more looking relativistically at the cosmos as a symmetric blown up ball We are going back to a real view of an energy dissipative world Read how we build on the successes of physics in the 19th century and apply the ideas of Il'ya Prigogine on the thermodynamics of open systems to dynamic vortex structures in an open cosmos Mechanics thermodynamics and electrodynamics merge with Maxwell's and Stokes equations to form a unit and the paradoxes disappear wonderfully and we now recognize that a projection of a real vortex filament into
