*Neutrosophic Sets and Systems, vol. 77/2025* Florentin Smarandache, Mohamed Abdel-Basset, Maikel Leyva-Vázquez, 2025-01-31 Neutrosophic Sets and Systems has been created for publications on advanced studies in neutrosophy, neutrosophic set, neutrosophic logic, neutrosophic probability, neutrosophic statistics that started in 1995 and their applications in any field such as the neutrosophic structures developed in algebra, geometry, topology, etc. Neutrosophy is a new branch of philosophy that studies the origin, nature and scope of neutralities as well as their interactions with different ideational spectra. This theory considers every notion or idea together with its opposite or negation and with their spectrum of neutralities in between them, i.e., notions or ideas supporting neither nor. The and ideas together are referred to as Neutrosophy. It is a generalization of Hegel's dialectics, the last one is based on and only. According to this theory, every idea tends to be neutralized and balanced by and ideas as a state of equilibrium. In a classical way, are disjoint two by two. But since in many cases the borders between notions are vague, imprecise, Sorites, it is possible that and of course have common parts two by two or even all three of them as well. Neutrosophic Set and Neutrosophic Logic are generalizations of the fuzzy set and respectively fuzzy logic, especially of intuitionistic fuzzy set and respectively intuitionistic fuzzy logic. In neutrosophic logic, a proposition has a degree of truth T, a degree of indeterminacy I, and a degree of falsity F, where T, I, F are standard or non-standard subsets of [0, 1]. Neutrosophic Probability is a generalization

of the classical probability and imprecise probability Neutrosophic Statistics is a generalization of the classical statistics
