## **Non Linear Time Series Extreme Events And Integer Value Problems:**

*Non-Linear Time Series* Kamil Feridun Turkman, Manuel González Scotto, Patrícia de Zea Bermudez, 2014-09-29 This book offers a useful combination of probabilistic and statistical tools for analyzing nonlinear time series Key features of the book include a study of the extremal behavior of nonlinear time series and a comprehensive list of nonlinear models that address different aspects of nonlinearity Several inferential methods including quasi likelihood methods sequential Markov Chain Monte Carlo Methods and particle filters are also included so as to provide an overall view of the available tools for parameter estimation for nonlinear models A chapter on integer time series models based on several thinning operations which brings together all recent advances made in this area is also included Readers should have attended a prior course on linear time series and a good grasp of simulation based inferential methods is recommended This book offers a valuable resource for second year graduate students and researchers in statistics and other scientific areas who need a basic understanding of nonlinear time series

*Time Series Analysis and Forecasting* Ignacio Rojas, Héctor Pomares, 2016-05-30 This volume presents selected peer reviewed contributions from The International Work Conference on Time Series ITISE 2015 held in Granada Spain July 1 3 2015 It discusses topics in time series analysis and forecasting advanced methods and online learning in time series high dimensional and complex big data time series as well as forecasting in real problems The International Work Conferences on Time Series ITISE provide a forum for scientists engineers educators and students to discuss the latest ideas and implementations in the foundations theory models and applications in the field of time series analysis and forecasting It focuses on interdisciplinary and multidisciplinary research encompassing the disciplines of computer science mathematics statistics and econometrics

*Practical Statistical Learning and Data Science Methods* O. Olawale Awe, Eric A. Vance, 2024-12-27 This contributed volume offers practical implementation strategies for statistical learning and data science techniques with fully peer reviewed papers that embody insights and experiences gathered within the LISA 2020 Global Network Through a series of compelling case studies readers are immersed in practical methodologies real world applications and innovative approaches in statistical learning and data science Topics covered in this volume span a wide array of applications including machine learning in health data analysis deep learning models for precipitation modeling interpretation techniques for machine learning models in BMI classification for obesity studies as well as a comparative analysis of sampling methods in machine learning health applications By addressing the evolving landscape of data analytics in many ways this volume serves as a valuable resource for practitioners researchers and students alike The LISA 2020 Global Network is dedicated to enhancing statistical and data science capabilities in developing countries through the establishment of collaboration laboratories also known as stat labs These stat labs function as engines for development nurturing the next generation of collaborative statisticians and data scientists while providing essential research infrastructure for researchers data producers and decision makers

**An Introduction to Discrete-Valued Time Series**

Christian H. Weiss, 2017-12-06 A much needed introduction to the field of discrete valued time series with a focus on count data time series Time series analysis is an essential tool in a wide array of fields including business economics computer science epidemiology finance manufacturing and meteorology to name just a few Despite growing interest in discrete valued time series especially those arising from counting specific objects or events at specified times most books on time series give short shrift to that increasingly important subject area This book seeks to rectify that state of affairs by providing a much needed introduction to discrete valued time series with particular focus on count data time series The main focus of this book is on modeling Throughout numerous examples are provided illustrating models currently used in discrete valued time series applications Statistical process control including various control charts such as cumulative sum control charts and performance evaluation are treated at length Classic approaches like ARMA models and the Box Jenkins program are also featured with the basics of these approaches summarized in an Appendix In addition data examples with all relevant R code are available on a companion website Provides a balanced presentation of theory and practice exploring both categorical and integer valued series Covers common models for time series of counts as well as for categorical time series and works out their most important stochastic properties Addresses statistical approaches for analyzing discrete valued time series and illustrates their implementation with numerous data examples Covers classical approaches such as ARMA models Box Jenkins program and how to generate functions Includes dataset examples with all necessary R code provided on a companion website An Introduction to Discrete Valued Time Series is a valuable working resource for researchers and practitioners in a broad range of fields including statistics data science machine learning and engineering It will also be of interest to postgraduate students in statistics mathematics and economics

### **Nonlinear Time Series Analysis in the Geosciences**

Reik V. Donner, 2008-08-18 The understanding of dynamical processes in the complex system Earth requires the appropriate analysis of a large amount of data from observations and or model simulations In this volume modern nonlinear approaches are introduced and used to study specific questions relevant to present day geoscience The approaches include spatio temporal methods time frequency analysis dimension analysis in particular for multivariate data nonlinear statistical decomposition methods designed for treating data with uneven sampling or missing values nonlinear correlation and synchronization analysis surrogate data techniques network approaches and nonlinear methods of noise reduction This book aims to present a collection of state of the art scientific contributions used in current studies by some of the world's leading scientists in this field
