It is a clinically oriented text that can be used by the student as well as the clinician. It provides thorough descriptions of the many binocular vision anomalies, describes the necessary testing procedures to correctly diagnose each disorder, and suggests the most appropriate management. Featuring many illustrations, photos, and case studies, particularly on strabismus and incomitant deviations, it presents an orderly practical approach to diagnosis, differential diagnosis, and treatment decision making. Every topic area in binocular vision anomalies is included, from heterophoria and accommodative disorders to severe strabismic disorders. In each chapter, an anomaly is identified, then classified according to its significant symptoms and clinical findings. Once a diagnosis is certain, the appropriate forms of treatment are discussed. Editors Rutstein and Daum are well known and respected in their field. They are scientists who have lectured extensively, have written many articles, and have a wealth of clinical experience.
