Statement of the problem **The Building Assets-Reducing Risks Program** Maryann Corsello, Anu Sharma, 2015

The Building Assets Reducing Risks BARR Model BARR is a comprehensive model that addresses the challenges that are part of the 9th grade transition year. BARR employs eight different school wide and individual strategies that are built on positive relationships and ongoing monitoring of student data. In 2010 BARR received an Investing in Innovation i3 Development grant from the US Department of Education to replicate BARR and conduct a randomized controlled trial to test its effectiveness. This report details the final results of the i3 Development grant. A large suburban high school in southern California participated in a within school Randomized Controlled Trial (RCT) of the BARR Model. A total of 555 9th grade students were randomly assigned to BARR and non BARR conditions. At the end of the RCT year BARR students had earned significantly more core course credits, higher grade point averages and had a lower course failure rate than non BARR students. BARR students also earned significantly higher standardized test scores on the Northwest Education Association's NWEA Measures of Academic Progress MAP scores in mathematics and reading than did non BARR students after one year of implementation, specifically an average of two years of growth in mathematics compared to one year of decline in the non BARR condition. In the second and third years of the grant BARR was implemented in the entire 9th grade and the core course failure rate continued to decline. In addition, the achievement gap between Hispanic and non Hispanic students closed by year two of implementation and remained closed in year three. Implementation fidelity of the BARR model was achieved in year one and continued to improve over the second and third years of the study. BARR was also implemented in two smaller rural high schools in Maine. Decreases in core course failure rate, increases in grade point averages and increases in standardized test scores in reading, language and mathematics were achieved if the BARR model was implemented with fidelity. BARR teachers reported improved relationships with students, increased ability to perceive student strengths, use of data to improve student performance, better communication with administration, less isolation and better problem solving of problematic student issues. Results were seen for both new and veteran teachers.

The following are appended:

The Impact of the Measures of Academic

Progress (MAP) Program on Student Reading Achievement David S. Cordray, Georgine M. Pion, Chris Brandt, Aydin Molefe, 2013 One of the most widely used commercially available systems incorporating benchmark assessment and training in differentiated instruction is the Northwest Evaluation Association's NWEA Measures of Academic Progress MAP program. The MAP program involves two components: 1) computer adaptive assessments administered to students three to four times per year and 2) teacher training and access to MAP resources on how to use data from these assessments to differentiate instruction. This report focuses on the program's impact after the second year of implementation and seeks to answer the following questions on implementation fidelity and student outcomes: 1) Were MAP resources, training, consultation, web-based materials delivered by NWEA and received and used by teachers as planned? 2) Did MAP teachers apply differentiated instructional practices in their classes to a greater extent than their control counterparts? 3) Did the MAP program, that is, training plus benchmark testing feedback, affect the reading achievement of grades 4 and 5 students after the second year of implementation as measured by the Illinois Standards Achievement Test (ISAT) reading scale scores or the MAP composite test scores in reading and language use? and 4) Were there variations in the impacts of the MAP intervention on grades 4 or 5 ISAT reading and MAP composite scores across subgroups of students after the second year of implementation? The study focused on grade 4 and 5 students in 32 public elementary schools across five districts in Illinois. The differential impact among low and high ability students at grade 4 suggests that the MAP program may have the greatest impact on low and high ability students.
