Supply Chain Planning Hans-Otto Günther,Herbert Meyr,2009-03-05 In recent years supply chain planning has emerged as one of the most challenging problems in the industry As a consequence the planning focus is shifting from the management of plant specific operations to a holistic view of the various logistics and production stages that is an approach in which suppliers, production plants and customers are considered as constituents of an integrated network A major driving force behind this development lies in the globalization of the world economy which has facilitated the cooperation between different partners working together in worldwide logistics networks Hence considerable cost savings can be gained from optimizing the structure and the operations of complex supply networks linking plants, suppliers, distribution centres and customers Consequently to improve the performance of the entire logistic chain more sophisticated planning systems and more effective decision support are needed Clearly successful applications of supply chain management have driven the development of advanced planning systems APS which are concerned with supporting decision making activities at the strategic, tactical and operational decision level These software packages basically rely on the application of quantitative methods which are used to model the underlying complex decision problems considering the limited availability of resources and the need to react on time to customer orders The core module at the mid term level of APS comprises operational supply chain planning In many industries production stages are assigned to different plants and distribution centres have been established at geographically dispersed locations

Supply Chain Management and Advanced Planning Hartmut Stadtler,Christoph Kilger,2005-12-06 To sum up there should be a copy on the bookshelf of all engineers responsible for detailed planning of the Product Delivery Process PDP The Editors highlight the impressive gains reported by companies exploiting the potential of coordinating organizational units and integrating information flows and planning efforts along a supply chain This publication is strong on coordination and planning It is therefore recommended as an up to date source book for these particular aspects of SCM International Journal of Production Research 2001 Vol 39 13 [Launch!](#)

Advertising and Promotion in Real Time Michael Solomon,2009 [Launch](#) Advertising and Promotion is written for advertising and promotion courses taught to students in the business school and journalism, mass communication students This textbook is the first of its kind to teach advertising concepts by reverse engineering a real advertising campaign from beginning to end In April 2007 SS K an innovative New York City communications agency launched the first ever branding campaign for msnbc.com with the tag A Fuller Spectrum of News [Launch](#) follows that campaign from initial agency pitch through roll out of print and media assets to post campaign analysis Throughout it exposes readers to the theory and concepts of advertising and promotion and the personalities and decisions that drove this campaign The book takes a rare look behind the curtain even letting you see some of the paths not chosen by the agency and client Students get a realistic sense of how theory plays out in practice and get a flavor for the exciting field of advertising and promotion And they consistently learn the

perspectives of both the advertising agency where many journalism and communications students will work and the client where many marketing majors will work. This is a unique book with a unique perspective by a unique author team and you won't find this kind of insight in any other text on the market. We think you're going to love it.
