### **Riding the Energy Transition**

Reda Cherif,Fuad Hasanov,Aditya Pande,2017-05-22 Recent technological developments and past technology transitions suggest that the world could be on the verge of a profound shift in transportation technology The return of the electric car and its adoption like that of the motor vehicle in place of horses in early 20th century could cut oil consumption substantially in the coming decades Our analysis suggests that oil as the main fuel for transportation could have a much shorter life span left than commonly assumed In the fast adoption scenario oil prices could converge to the level of coal prices about 15 per barrel in 2015 prices by the early 2040s In this possible future oil could become the new coal

of a Business Model Approach Fabian Hoeft,2019-10-24 Master s Thesis from the year 2019 in the subject Business economics Business Management Corporate Governance grade 1 3 Niederrhein University of Applied Sciences Krefeld School of Business and Economics language English abstract Today s world of mobility is characterised by a high degree of dynamism and change is becoming apparent Currently around 45 million passenger cars with conventional combustion engines powered by diesel or petrol are registered in Germany The share of electric vehicles is still well below one per cent Nevertheless the voices for sustainable and environmentally friendly transport are becoming louder One political measure in this respect is the implementation of driving bans in major German cities for some conventional combustion cars Car electrification is a solution for converting cars with conventional combustion engines to electric drives In the context of this thesis car electrification is regarded as a transition solution towards a nationwide electrified transport network of new electric cars A comprehensive concept of a business model approach from a start up perspective has been developed based on the analysis of the environment industry and customer needs Analysing the structure of the electrical conversion industry revealed that the subject of car electrification is hardly widespread and that current suppliers have only converted a smaller number of cars Besides the small scale of implementation the operational execution by existing suppliers can be considered weak in terms of competitiveness and sustainability The analysis of the needs of potential customers of car electrification using qualitative and quantitative methods has led to incredibly valuable insights for the development of the business model approach A high openness to purchase was expressed considering some of the factors mentioned such as a test drive with an electrified car before purchase and a durability guarantee of the conversion The high relevance of initial acquisition costs compared to operating expenses in the purchase decision for passenger cars is another precious insight The business model approach developed based on the findings obtained differs fundamentally from the strategies of today s providers By incorporating the existing infrastructure of workshops and service points proximity to the end customer and scalability of the business operation can be achieved Partnering with universities and industry are two critical elements in the development of

**Short Wave Craft**, 1937 *Designing the Future: How Ford, Toyota, and other World-Class Organizations Use Lean Product Development to Drive Innovation and Transform Their Business* James M. Morgan, Jeffrey K. Liker, 2018-10-26 How companies are using lean development to revolutionize their product and service offerings. Vital lessons any business leader can use as an engine of innovation. How did Ford Motors use Lean Development to pull off one of the most impressive corporate turnarounds in history? Largely by avoiding the mistakes that so many companies make when in a death spiral. They looked beyond manufacturing efficiency to change the very fundamentals of how they developed vehicles. In *Designing the Future*, Lean product development expert James Morgan and world renowned Lean guru Jeffrey K. Liker reveal why so many companies have achieved only moderate success with Lean in operations with a limited impact on their overall business. They take you through the process of bringing the best of Lean management to your enterprise in order to link your business strategy to superior value designed for customers. The authors provide an actionable approach to building a better future for your business, fueled by an iterative, integrated process that relies on simultaneous engineering linking strategy and vision. They illustrate how to empower skilled and talented people to make collaboration and innovation a habit hour to hour and day to day. It's the secret of full implementation of Lean and this groundbreaking guide takes you through every step of the
