Nwea Cut Scores Illinois 2014:

Same as It Never Was Gregory Michie, 2019 After a decade as an education professor Greg Michie decided to return to his teaching roots He went back to the same Chicago neighborhood the same public school and the same grade level and subject he taught in the 1990s But much had changed both in schools and in the world outside them *Same As It Never Was* chronicles Michie's efforts to navigate the new realities of public schooling while also trying to rediscover himself as a teacher Against a backdrop of teacher strikes and anti testing protests the movement for Black lives and the deepening of anti immigrant sentiment this book invites readers into an award winning teacher's classroom as he struggles to teach toward equity and justice in a time where both are elusive for too many children in our nation's schools Michie's volume brings us back to the reality of public school teaching From the Foreword by Gloria Ladson Billings University of Wisconsin Madison Teachers will love this beautiful book and anyone who cares about the future of our democracy Sonia Nieto professor emerita University of Massachusetts Amherst Michie helps us to see the successes tensions shortcomings and triumphs in his own classroom and community so that we may see the extraordinary possibility of the work to be done in ours Cornelius Minor educator and author *Honest and compassionate* Edwin Mayorga Swarthmore College *Linking the PARCC Assessments to NWEA MAP Tests for Illinois* Northwest Evaluation Association, 2016 Northwest Evaluation Association NWEA is committed to providing partners with useful tools to help make inferences from the Measures of Academic Progress MAP interim assessment scores One important tool is the concordance table between MAP and state summative assessments Concordance tables have been used for decades to relate scores on different tests measuring similar but distinct constructs These tables typically derived from statistical linking procedures provide a direct link between scores on different tests and serve various purposes Aside from describing how a score on one test relates to performance on another test they can also be used to identify benchmark scores on one test corresponding to performance categories on another test or to maintain continuity of scores on a test after the test is redesigned or changed Concordance tables are helpful for educators parents administrators researchers and policy makers to evaluate and formulate academic standing and growth Recently NWEA completed a concordance study to connect the scales of the Partnership for Assessment of Readiness for College and Careers PARCC English language arts ELA and math with those of the MAP Reading and MAP for Mathematics assessments for Illinois IL In this report presented are the 3rd through 8th grade cut scores on MAP reading and mathematics scales that correspond to the benchmarks that Illinois adopted for its PARCC ELA and math tests Information about the consistency rate of classification based on the estimated MAP cut scores is also provided along with a series of tables that predict the probability of receiving a Level 4 i e Proficient or higher performance designation on the PARCC assessments based on the observed MAP scores taken during the same school year A detailed description of the data and analysis method used in this study is provided in the appendix **Proficiency Guidance on New State Summative Assessments from NWEA.**

Northwest Evaluation Association, 2015 Measures of Academic Progress MAP computer adaptive interim assessments serve many purposes from informing instruction to identifying students for intervention to projecting proficiency on state accountability assessments To make sure its flagship product does the latter Northwest Evaluation Association NWEA routinely conducts studies that provide estimates of how MAP RIT scores correspond to proficient and other performance levels on summative state accountability assessments These studies provide schools and districts using MAP assessments with tools to predict whether students will demonstrate adequate reading and mathematics achievement on their state accountability assessments and allow them to adjust instructional plans accordingly In recent months many school districts have requested that NWEA provide similar studies to estimate how MAP RIT scores correspond to college and career readiness as it will be measured by various tests These include the two upcoming Common Core consortia tests Smarter Balanced Assessment Consortium Smarter Balanced and Partnership for Assessment of Readiness for College and Careers PARCC as well as other non consortia tests aligned to the Common Core standards To be clear NWEA will conduct new studies However Smarter Balanced and PARCC have not yet finalized their proficiency level cut scores Smarter Balanced did release preliminary threshold scale scores in November of 2014 but final cut score values will not be verified and adopted for either assessment until the summer of 2015 PARCC timeline Smarter Balanced timeline This information is critical in conducting a linking study since students observed scores on both tests are examined to understand how one test predicts performance on the other While nobody currently knows what college and career readiness scores on PARCC will eventually be we can make educated guesses and some states have already done so New York Illinois and Kentucky have all implemented changes in their state proficiency benchmarks in anticipation of more rigorous standards Furthermore the preliminary threshold scale scores released by Smarter Balanced may provide additional insight into what college readiness might look like on PARCC once its performance standards have been set These studies provide a preliminary indication of what college and career readiness may look like for MAP users in other states that align their tests to new standards But the question remains What can school districts that use MAP RIT scores do right now to understand whether students are on track to meet college and career readiness performance standards One approach is to use cut scores that do currently exist from the New York Illinois and Kentucky tests or from the initial estimates for Smarter Balanced and relate them to MAP RIT cut scores It s important to note that these state cut scores will not coincide precisely with the college and career readiness values that PARCC or other states will eventually adopt but they may provide a guide during the interim The tables and figures shown in the appendix may be used as rough guidelines The values presented here simply represent an educated guess about what those benchmarks might look like given that other assessments have defined college readiness similarly As soon as the new cut scores and performance levels are finalized NWEA will conduct studies that directly examine the ability of MAP to predict performance on those tests Contained in the appendix are links used in this document [Linking the](#)

Alaska AMP Assessments to NWEA MAP Tests Northwest Evaluation Association, 2016 Northwest Evaluation Association

NWEA is committed to providing partners with useful tools to help make inferences from the Measures of Academic Progress MAP interim assessment scores. One important tool is the concordance table between MAP and state summative assessments. Concordance tables have been used for decades to relate scores on different tests measuring similar but distinct constructs. These tables typically derived from statistical linking procedures provide a direct link between scores on different tests and serve various purposes. Aside from describing how a score on one test relates to performance on another test, they can also be used to identify benchmark scores on one test corresponding to performance categories on another test or to maintain continuity of scores on a test after the test is redesigned or changed. Concordance tables are helpful for educators, parents, administrators, researchers, and policy makers to evaluate and formulate academic standing and growth. Recently, NWEA completed a concordance study to connect the scales of the Alaska Measures of Progress AMP English Language Arts ELA and Mathematics assessments with those of the MAP Reading and MAP for Mathematics assessments. This report presents the 3rd through 10th grade cut scores on MAP reading and mathematics scales that correspond to the benchmarks on the AMP ELA and math tests. Information about the consistency rate of classification based on the estimated MAP cut scores is also provided along with a series of tables that predict the probability of receiving a Level 3 i.e. Proficient or higher performance designation on the AMP assessments based on the observed MAP scores taken during the same school year. A detailed description of the data and analysis method used in this study is provided in the Appendix.

Aligning the NWEA RIT Scale with the Maryland School Assessment (MSA) Branin, Bowe, John Cronin, 2005. Recently, NWEA completed a project to connect the scale of the Maryland School Assessment MSA with NWEA's RIT scale. One large school system participated in the study using test information from a group of over 24,000 students enrolled in third, fourth, and fifth grade who took both the MSA and NWEA reading tests in the spring of 2005. Information from these tests was used in a comprehensive study to identify the capacity of the RIT scale to predict success on the MSA and to identify performance level scores on the RIT scale that would indicate a good chance of success on this test. Three methodologies: linear regression, second-order regression, and Rasch status on standards called Rasch SOS were used to derive estimates of cut scores. In each case, the most accurate of the three estimates was used to arrive at the recommended cut score seen in this report. The authors estimated cut scores for each of the performance levels at grades three, four, and five for reading. Contains 2 figures and 4 tables.

Assessing Changes in the Projected NWEA RIT Scale Cut Scores for the 2002 and 2004 Study of Alignment with the Palmetto Achievement Challenge Tests John Cronin, Martha McCall, 2004. Northwest Evaluation Association regularly conducts studies of alignment between the RIT scale and the scales used for statewide achievement tests. In recent years, educational experts have put increasing emphasis on the need for triangulation of student achievement information in order to assure that important educational decisions are based on data that is robust and corroborated. Indeed,

many school systems use NWEA assessments as one way in which they triangulate data from their state assessment and other tests that may be in use in their district. The catalyst for this investigation was completion of a recent study to confirm and monitor the alignment between the PACT and NWEA assessments (Cronin, 2004). For the most part, it was found that the two assessments remained closely correlated and that NWEA results predicted PACT status reasonably well. Nevertheless, it was also found that performance level estimates at a few grades showed large changes and that the predictive accuracy statistics stemming from the 2004 study were both lower than those generated from the 2002 study and also lower than those gathered from most of the other state studies. Contains 12 tables.

Aligning the NWEA RIT Scale with the Maine Educational Assessments (MEA) John Cronin, 2004. Recently, the Northwest Evaluation Association (NWEA) completed a project to connect the scale of the MEA with NWEA's RIT scale. Six Maine school systems participated in the study, using test information from a group of over 800 students enrolled in fourth and eighth grade who took both the MEA and NWEA reading and mathematics tests in the spring of 2004. Information from these tests was used in a comprehensive study to identify the capacity of the RIT scale to predict success on the MEA and to identify performance level scores on the RIT scale that would indicate a good chance of success on this test. Three methodologies—linear regression, second order regression, and Rasch status on standards called Rasch SOS—were used to derive estimates of cut scores. In each case, the most accurate of the three estimates was used to arrive at the recommended cut score seen in this report. Cut scores were estimated for each of the performance levels at grades four and eight for reading and mathematics. Contains 4 tables and 2 figures.

A Study of the Ongoing Alignment of the NWEA RIT Scale with the South Carolina Palmetto Achievement Challenge Tests (PACT)

John Cronin, 2004. This study investigated the relationship between the scales used for the Palmetto Achievement Challenge Tests (PACT) assessments and the RIT scales used to report performance on Northwest Evaluation Association tests. The RIT scale was developed using Rasch scaling methodologies. RIT-based tests are used to inform a variety of educational decisions at the district, school, and classroom level. They are also used to monitor academic growth of students and cohorts. Districts choose whether to include these assessments in their local assessment programs. The study determined the reading language usage and mathematics RIT score equivalents for the PACT performance levels in English Language Arts and Mathematics. Test records for more than 22,000 students were included in this study. The current study of the PACT was undertaken in an effort to monitor the accuracy and stability of NWEA estimated cut scores relative to these tests. In addition, the scope of this study has been expanded to include estimation of cut scores in language usage that would correspond to each proficiency level on the English Language Arts portion of the PACT. Contains 18 tables and 5 figures.
