NWEA FAQ Northwest Evaluation Association, 2015 Northwest Evaluation Association NWEA conducts norming studies every several years to provide the best and most up to date information we can about student achievement and growth to better support educational decision making It is an important part of our commitment to our partners The most recent NWEA norms were released in July 2015 Just as we expect student performance to change with time norms of student performance will change correspondingly For 2015 several factors may have influenced how the US school age population performed on Measures of Academic Progress MAP assessments of language usage mathematics and reading over the 2011-12 2012-13 and 2013-14 school years Prominent among these possible factors are the introduction of Common Core instruction and Common Core versions of MAP But as with all empirical studies changes in scope and data necessitated changes in statistical design and analyses The methodological improvements introduced in the 2015 norms have resulted in a set of norms that are more representative of the US school age population than previous NWEA norms Methodological changes involved differences in the way post stratification weights were developed and the way growth was modeled Details of these changes are addressed more thoroughly in the 2015 Norms Study As a result of the improved methodology partners can expect some differences

from previous norms as explained below North Carolina Linking Study Northwest Evaluation Association,2014 Recently the Northwest Evaluation Association NWEA completed a study to connect the scale of the North Carolina State End of Grade EOG Testing Program used for North Carolina s mathematics and reading assessments with NWEA s Rausch Interval Unit RIT scale Information from the state assessments was used in a study to establish performance level scores on the RIT scale that would indicate a good chance of success on these tests To perform the analysis we linked together state test and NWEA test results for a sample of 18 730 North Carolina students who completed both exams in the spring of 2013 the term in which the EOG is administered For the spring season labeled current season an Equipercentile method was used to estimate the RIT score equivalent to each state performance level For fall labeled prior season we determined the percentage of the population within the selected study group that performed at each level on the state test and found the equivalent percentile ranges within the NWEA dataset to estimate the cut scores For example if 40% of the study group population in grade 3 mathematics performed below the proficient level on the state test we would find the RIT score that would be equivalent to the 40th percentile for the study population this would not be the same as the 40th percentile in the NWEA norms This RIT score would be the estimated point on the NWEA RIT scale that would be equivalent to the minimum score for proficiency on the state test Documentation about this method can be found on our website Table Sets 1 and 2 show the best estimate of the minimum RIT equivalent to each state performance level for same season spring and prior season fall RIT scores These tables can be used to identify students who may need additional help to perform well on these tests Table Sets 3 and 4 show the estimated probability of a student receiving a proficient score on the state assessment based on that student s RIT score These tables can be used to assist in identifying students who are not likely to pass these assessments thereby increasing the probability that intervention strategies will be planned and implemented These tables can also be useful for identifying target RIT score objectives likely to correspond to successful or proficient performance on the state test Table 5 shows the correlation coefficients between Measured Academic Performance MAP and the state test in each grade These statistics show the degree to which MAP and the state test are linearly related with values at or near 1 0 suggesting a perfect linear relationship and values near 0 0 indicating no linear relationship Table 6 shows the percentages of students at each grade and within each subject whose status on the state test i e whether or not the student met standards was accurately predicted by their MAP performance and using the estimated cut scores within the current study This table can be used to understand the predictive validity of MAP with respect to the EOG **2011 Normative Data** Northwest Evaluation Association,2017 Having the right data is a key component of individualizing instruction for each child The Northwest Evaluation Association NWEA has the ability to measure a student s achievement and academic growth independent of grade across time From the insight provided with Measures of Academic Progress MAP and its reports educators can compare class or grade level performance to students from a wide variety of schools across the country Status norms provide a starting

point for educators to review data and help them gain an understanding of each child's current academic level where they need focused instruction and the extent of their progress. The 2011 NWEA RIT Scale Norms Study provides growth and status norms for all five RIT scales: Reading Language Usage, Mathematics General Science, and Science Concepts and Processes.
