**Pathogenesis of Mucosally-transmitted Chimeric Simian/human Immunodeficiency Virus (SHIV)** Krista K. Steger,1997    **The Potentialities and Limitations of the Nude Mouse** Tatsushi Nomura,1977    Proceedings of the Fifth Berkeley Symposium on Mathematical Statistics and Probability Lucien Marie Le Cam,Jerzy Neyman,1967    Journal National Cancer Institute (U.S.),1977    **Science** John Michels (Journalist),1992    **Journal of the National Cancer Institute** ,1972-11    **Archives of Virology** ,1987    **Viral Pathogenesis** Neal Nathanson,Rafi Ahmed,1997 Here is the most complete reference devoted specifically to viral pathogenesis describing both the development of viral disease and the host virus interaction Presenting contributions from leading authorities in this particularly topical field this comprehensive text exposit the current knowledge on the pathogenesis of viruses an understanding of which is critical to treatment and prevention of viral diseases The book opens with a thorough review of principles covering in detail the life cycle of viruses including entry dissemination shedding and transmission and replication the pathology of viral disease including disease mechanisms virus virulence and viral oncogenesis immune responses including immune suppression and therapeutic applications The second section focuses on experimental pathogenesis covering detection and quantification of viral genomes messages and proteins in tissues and organs and examining classical and new methods for animal studies Chapters in the next section devoted to classical models of viral pathogenesis cover ectromelia poliomyelitis rabies lymphocytic choriomeningitis virus avian and murine retroviruses lentiviruses and reoviruses The final section covers systems pathogenesis emphasizing viral diseases of humans but also drawing on animal studies that elucidate the pathogenesis of human infections    **DNA Vaccination/Genetic Vaccination** Hilary Koprowski,David B. Weiner,1997-12-11 Genetic DNA immunization represents a novel approach to vaccine and immune therapeutic development The direct injection of nucleic acid expression cassettes into a living host results in a limited number of its cells becoming factories for production of the introduced gene products This host inappropriate gene expression has important immunological consequences resulting in the specific immune activation of the host against the gene delivered antigen The recent demonstration by a number of laboratories that the induced immune responses are functional in experimental models against both specific infectious diseases and cancers is likely to have dramatic consequences for the development of a new generation of experimental vaccines and immune therapies This technology has the potential to enable the production of vaccines and immune based therapies that are not only effective immunologically but are accessible to the entire world rather than just to the most developed nations Vaccine Development Vaccination against pathogenic microorganisms represents one of the most important advances in the history of medicine Vaccines including those against polio measles mumps rubella hepatitis A hepatitis B pertussis and other diseases have dramatically improved and protected more human lives than any other avenue of modern medicine The vaccine against smallpox for example has been so successful that it is now widely believed that this

malicious killer responsible for more deaths in the twentieth century than World Wars I and II combined has been removed from the face of the earth    **Proceedings of the National Academy of Sciences of the United States of America**
