Internet Video Data Streaming Ye Tian, Min Zhao, Xinming Zhang, 2017-10-20 This book investigates the problem of reducing operating cost for a video streaming content delivery network CDN including both the CDN's energy and traffic costs It first introduces the key issues and design choices of representative real world CDNs and discusses the energy saving techniques for data centers and CDNs Then based on a measurement study on a large video streaming CDN it reveals an inherent conflict between improving a video streaming CDN's energy efficiency for energy saving and maintaining the CDN's ISP friendly server selection policy Further it discusses a cost aware capacity provisioning algorithm that not only allows the service capacity of a CDN's server clusters in numerous ISPs to be dynamically planned but also means that the overall operating cost including both the energy consumptions and the cross ISP traffics can be further optimized In addition it uses the workload derived from real world measurement and also implements real values of the actual power and bandwidth prices to evaluate the capacity provisioning algorithm showing that it can significantly reduce the overall operating cost of a video streaming CDN and effectively avoid frequent server switches Lastly the book outlines a number of potential research directions regarding cost aware content delivery The measurement analysis and optimization methodologies and results presented in this book are of particular interest to researchers in the Internet and networking area *Kiplinger's Personal Finance* ,1998-01 The most trustworthy source of information available today on savings and investments taxes money management home ownership and many other personal finance topics **Self-Organizing Systems** Christian Bettstetter, Carlos Gershenson, 2011-02-03 This book constitutes the refereed proceedings of the 5th International Workshop on Self Organizing Systems IWSOS 2011 held in Karlsruhe Germany in February 2011 The 9 revised full papers presented together with 1 invited paper were carefully selected from 25 initial submissions It was the 5th workshop in a series of multidisciplinary events dedicated to self organization in networked systems with main focus on communication and computer networks The papers address theoretical aspects of self organization as well as applications in communication and
