Medication Safety during Anesthesia and the Perioperative Period Alan Merry, Joyce Wahr, 2021-04-07 With medication errors in healthcare an internationally recognised problem this much needed book delivers a comprehensive approach to understanding medication safety in the perioperative period. It reviews what medication adverse events are and how often and where these errors occur as well as exploring human cognitive psychology and explaining why things can go wrong at any time in a complex system. Detailed discussions around mistakes judgement errors slips and lapses and violations are presented alongside real life examples of the indistinct line between negligence and inevitable error. The co authors bring a wide and practical perspective to the theories and interventions that are available to improve medication safety including legal and regulatory actions that further or impede safety. Essential reading for anesthesiologists, nurses, pharmacists and other perioperative team members committed to improving medication safety for their patients and also an invaluable resource for those who fund, manage and regulate healthcare.

The Biology of Gambling Mikal J. Aasved, 2003 The Biology of Gambling is the third volume in the Gambling Theory and Research Series. Author Mikal Aasved wrote this series to meet the need for a comprehensive review and synthesis of the many published materials pertaining to gambling theory and research. The series summarizes and critiques the findings and conclusions of investigators who have attempted to determine the motivations for gambling both normative and excessive. Dr Aasved provides a thorough examination of the research efforts and theoretical explanations of leaders in the field of gambling studies. This volume focuses on the etiological or causal theories that have been advanced by specialists in the medical sciences, an increasing number of whom are adopting the view that biological factors play an important role in the development of many addictive, obsessive-compulsive and other maladaptive behavior disorders. The fifteen chapters are divided into four parts. Part I reviews medical or disease models of addiction, discussing early and later conceptions. The core features of addiction, the alcohol dependence syndrome, heritability of addiction, longitudinal studies and the quest to discover the biological basis of addiction are explored in detail. Part II examines the medical models of pathological gambling by exploring early ideas on gambling and human evolution, recent definition and diagnosis of pathological gambling, criticisms of the medical and addiction models, treatment goals and the ongoing quest to discover the biological basis of pathological gambling. Part III concerns multicausal models of pathological gambling and focuses on general theories of addiction, gambling specific theories and finishes with a critique of multicausal approaches. Part IV integrates the contents of the book by highlighting its main points and offering such concluding observations as Where do we now stand and where do we go from here. This book, as well as the entire
