Cybercriminals domestic and foreign are launching attacks day and night using malware, phishing scams, deepfakes, artificial intelligence and other unscrupulous schemes designed to steal your data and hold it hostage. When they win it costs nations, businesses and individuals trillions of dollars annually a figure so massive that it ranks as the third largest economy in the entire world. It's possible to fight back but it'll take more than a strong password. Drawing on his years of experience as an FBI spy hunter and national security strategist Eric O'Neill casts light on these malicious actors' tactics for stealing personal data and exploiting victims. Armed with this knowledge O'Neill shares his method called PAID that you can use to defend yourself and stop attackers in their tracks. Prepare: Pinpoint your most critical data, identify where it resides and who can access it and build your defenses around it. Assess: Continuously reassess your security and apply counterintelligence tactics to identify scams and cyberattacks. Investigate: Stay educated and hunt the threat before the threat hunts you. Decide: Using your new aptitude make smart, rapid decisions under pressure.
