## **Oxygenases And Model Systems Catalysis By Metal Complexes:**

**Oxygenases and Model Systems** T. Funabiki, 2012-12-06 Oxygenases have been the subject of much study and are of great interest and application Biomimetic chemistry of oxygenases has yielded clarification of enzyme structures and reaction mechanisms and has also led to the development of synthetic oxygenation processes This volume contains 8 chapters written by leading researchers which together present an overview of di and mono oxygenases and their model systems from the point of view of functions structures and mechanisms An up to date clarification of structures around active centres of heme and nonheme oxygenases is given with reference to the design of model complexes Various contributions also discuss in detail the formation structure and reactivity of metal oxygen and metal substrate species in both enzyme and model systems The contents of the volume address the interface between bioinorganic chemistry and homogeneous catalysis and contains much to emphasize the importance of catalytic studies in bio and biomimetic chemistry Audience Research chemists interested in the use of oxygenases in catalysis

Cornils, 2003-10-17 Publisher Description *Advances in Catalytic Activation of Dioxygen by Metal Complexes* László I. Simándi, 2006-04-11 The subject of dioxygen activation and homogeneous catalytic oxidation by metal complexes has been in the focus of attention over the last 20 years The widespread interest is illustrated by its recurring presence among the sessions and subject areas of important international conferences on various aspects of bioinorganic and coordination chemistry as well as catalysis The most prominent examples are ICCS ICBIC EUROBIC ISHC and of course the ADHOC series of meetings focusing on the subject itself Similarly the number of original and review papers devoted to various aspects of dioxygen activation are on the rise This trend is due obviously to the relevance of catalytic oxidation to biological processes such as dioxygen transport and the action of oxygenase and oxidase enzymes related to metabolism The structural and functional modeling of metalloenzymes particularly of those containing iron and copper by means of low molecular complexes of iron copper ruthenium cobalt manganese etc have provided a wealth of indirect information helping to understand how the active centers of metalloenzymes may operate The knowledge gained from the study of metalloenzyme models is also applicable in the design of transition metal complexes as catalysts for specific reactions This approach has come to be known as biomimetic or bioinspired catalysis and continues to be a fruitful and expanding area of research

**Applied Homogeneous Catalysis with Organometallic Compounds** Boy Cornils, Wolfgang A. Herrmann, 2002-05-22 Homogeneous catalysis is the success story of organometallic chemistry Since the discovery of hydroformylation by O Roelen in 1938 catalytic applications have paved the way of organometallic compounds in industry Bulk and fine chemicals and even natural products are being produced via homogeneous organometallic catalysis The enormous breadth of this topic in view of

both basic research and industrial application is met in this three volume handbook edited jointly by W A Herrmann and B Cornils The list of contributors reads like a who is who in organometallic chemistry and homogeneous catalysis In this handbook experts will find the current state of the art in their field and advanced students will benefit from the concise treatment of important catalytic reactions and processes With its balanced presentation of the truly interdisciplinary topic and its outstanding editor and authorship the Cornils Herrmann is beyond common standards Now in its second completely revised and enlarged edition

Simándi,2003-01-31 The catalytic activation of dioxygen continues to attract interest both due to its biological importance and synthetic potential Metalloenzymes play crucial roles in metabolism by living organisms The modelling of metalloenzymes by biomimetic metal complexes helps the search for useful oxidation catalysts and the understanding of their mechanisms of operation Dioxygen is also the oxidant of choice in emission free technologies aimed at minimising pollution of the environment in line with the green chemistry requirements This volume is devoted to recent progress in the field of catalytic oxidations using ruthenium copper iron gold cobalt and other complexes Products and mechanistic aspects are given special emphasis throughout the book
