substantive either to measure changes in performance or to predict the effects on performance of stresses soldiers commonly experience in operational environments. The committee's task was to identify and evaluate new technologies to determine whether they could help resolve important issues in military nutrition research. The book contains the committee's summary and recommendations as well as individually authored chapters based on presentations at a 1995 workshop. Other chapters cover techniques of body composition assessment, tracer techniques for the study of metabolism, ambulatory techniques for the determination of energy expenditure, molecular and cellular approaches to nutrition, the assessment of immune function and functional and behavioral measures of nutritional status.

Pre-Hospital Anesthesia Handbook Andrew Griffiths, Tim Lowes, Jeremy Henning, 2010-06-04. Pre Hospital Anaesthesia is one of the most demanding interventions that can be made in the field. The exact incidence of failed intubation is difficult to quantify but it is clear that it is higher than in hospital. Equally it is certain that anyone undertaking it should have clear instruction in the technique and a thorough understanding of all it entails. This handbook details the procedures, drugs and algorithms used by the crews of the Great North Air Ambulance who have been providing this life saving intervention since 2004. It draws on huge experience in the field and provides a spring board for any practitioner who wishes to take it on.
