*Smart Urban Mobility* Michèle Finck, Matthias Lamping, Valentina Moscon, Heiko Richter, 2020-09-28 This book adds a critical perspective to the legal dialogue on the regulation of smart urban mobility. Mobility is one of the most visible sub domains of the smart city which has become shorthand for technological advances that influence how cities are structured: public services are fashioned and citizens coexist. In the urban context mobility has come under pressure due to a variety of different forces such as the implementation of new business models e.g. car and bicycle sharing, the proliferation of alternative methods of transportation e.g. electric scooters, the emergence of new market players and stakeholders e.g. internet and information technology companies and advancements in computer science in particular due to artificial intelligence. At the same time demographic changes and the climate crisis increase innovation pressure. In this context law is a seminal factor that both shapes and is shaped by socio economic and technological change. This book puts a spotlight on recent developments in smart urban mobility from a legal regulatory and policy perspective. It considers the implications for the public sector, businesses and citizens in relation to various areas of public and private law in the European Union including competition law, intellectual property law, contract law, data protection law, environmental law, public procurement law and legal philosophy. *The Techlash and Tech Crisis Communication* Nirit Weiss-Blatt, 2021-03-24 The Techlash and Tech Crisis Communication provides an in depth analysis of the evolution of tech journalism. The emerging tech backlash is a story of pendulum swings: we are currently in tech dystopianism after a long period spent in tech utopianism.

*A New History of Modern Computing* Thomas Haigh, Paul E. Ceruzzi, 2021-09-14 How the computer became universal. Over the past fifty years the computer has been transformed from a hulking scientific supertool and data processing workhorse remote from the experiences of ordinary people to a diverse family of devices that billions rely on to play games, shop, stream music and movies, communicate and count their steps. In *A New History of Modern Computing* Thomas Haigh and Paul Ceruzzi trace these changes. A comprehensive reimagining of Ceruzzi's *A History of Modern Computing*, this new volume uses each chapter to recount one such transformation describing how a particular community of users and producers remade the computer into something new. Haigh and Ceruzzi ground their accounts of these computing revolutions in the longer and deeper history of computing technology. They begin with the story of the 1945 ENIAC computer which introduced the vocabulary of programs and programming and proceed through email, pocket calculators, personal computers, the World Wide Web, videogames, smart phones and our current world of computers everywhere in phones, cars, appliances, watches and more. Finally they consider the Tesla Model S as an object that simultaneously embodies many strands of computing.
