during the First World War The dye extracted from a plant growing in one region may differ slightly from that found in a closely related species growing in another the Japanese and Chinese species of Phellodendron Amur cork tree and related plants are a good example Analysis of the dyes used for a fabric may thus suggest the region in which it was dyed Trade records can provide additional useful evidence as shown by a comparison of dyed textiles from the Ryukyu Kingdom Okinawa and neighboring islands and Indonesia The use of non invasive spectrometric methods to examine dyes and pigments has increased considerably notably portable methods that can be taken to the object This is essential in the case of manuscripts that cannot be moved from the library holding them such as the Aztec Codex Borbonicus The application of multispectral imaging techniques to textile dyes is relatively recent and if high performance liquid chromatography can also be carried out as in the case of the Italian polychrome laces described in this book valuable and informative results can be achieved These are some of the topics presented at the 33rd and 34th meetings of Dyes in History and Archaeology held in Glasgow 2014 and Thessaloniki 2015 other analytical methods historical Chinese dyeing practices and the always fascinating topic of indigo may also be found in this book
