With the textbook, students gain access to an extensive library of video tutorials. They also receive AutoCAD prototype drawings for each CAD assignment, lettering practice sheets, and multi view sketching grid sheets in PDF format.

**Broad Appeal** Students taking introductory technical drawing classes usually have diverse career interests. Traditional technical drawing texts which focus solely on mechanical drawing projects hold little interest for these students so Technical Drawing 101 with AutoCAD includes projects in which students create working drawings for a mechanical assembly as well as for an architectural project. Learners will master these topics with the same clear instruction and step by step process that is featured in the rest of the textbook. The newly added chapter on civil drafting touches on types of civil drawings, civil bearings, courses and units and concludes with a mortgage survey project. Another brand new chapter on electrical and electronics drafting explains the types of working drawings and graphics found in this field, circuits, symbols and components and schematic diagrams followed by an FM tuner project. The inclusion of these chapters helps capture the interest of more students while adding even more multidisciplinary appeal to the text.

**Video Tutorials** The video tutorials that are included with this textbook are designed to get students comfortable with the user interface and demonstrate how to use many of AutoCAD's commands and features. The videos progress to more advanced topics that walk students through completing several of the projects in the book. Icons throughout the book alert learners to times when they should access downloads and videos.

In recognition of the diverse career interests of our students Technical Drawing 101 includes projects in which students create working drawings for a mechanical assembly as well as for an architectural project. We include architectural drawing because our experience has shown that many if not most first semester drafting students are interested in careers in the architectural design field and that a traditional technical drawing text which focuses solely on mechanical drawing projects holds little interest for these students. The multidisciplinary approach of this text and its supporting materials are intended to broaden the appeal of the curriculum and increase student interest and it is hoped future enrollments.
