**The Philosophy of Artificial Life** Margaret A. Boden,1996 The aim of this series is to bring together important recent writings in major areas of philosophical inquiry selected from a variety of sources mostly periodicals which may not be conveniently available to the university student or the general reader The editor of each volume contributes an introductory essay on the items chosen and on the questions with which they deal A selective bibliography is appended as a guide to further reading This volume offers a selection of the most important philosophical work in the new and fast growing interdisciplinary area of artificial life it will set the agenda for future study and research Artificial life A Life research aims to synthesize the characteristics of life by artificial means particularly employing computer technology The essays chosen explore such fascinating themes as the nature of life the relation between life and mind and the limits of technology The first two papers one of which is the classic A Life manifesto by Christopher Langton provide a general overview of the subject and compare it with artificial intelligence AI in Part II the contributors describe examples of A Life research Part III discusses various explanatory strategies in A Life and relates them to approaches in AI and cognitive science while Part IV focuses on the concept of life in general Finally Part V explores A Life s relation to functionalism and the feasibility of strong A Life

Dogonadze,1985 The importance of solvation as a concept which covers quite generally the interactions between a molecular solute particle and a macroscopic body of surrounding solvent is well recognized Solvation plays a major role in the distribution of elements in the geo and hydrosphere and most chemical and biological processes involve solvated reactants and products the electronic and molecular structure of which are strongly determined by solvation This three volume monograph has been written collectively by 50 authors from 14 countries who are specialists in different areas of solvation science Part A deals with the theory of solvation Part B is entirely devoted to spectroscopy of solvation and Part C covers solvation phenomena in specific physical chemical and biological systems The volumes will be an invaluable reference source for physicists physical chemists and biophysicists undertaking investigations into the diversified and fascinating areas of the physics and chemical physics of solvation at postgraduate and professional research levels

Stokes,Hugh Neuburger,1998-02-18 The authors present a number of financial market studies that have as their general theme the econometric testing of the underlying econometric assumptions of a number of

financial models More than 30 years of financial market research has convinced the authors that not enough attention has been paid to whether the estimated model is appropriate or most importantly whether the estimation technique is suitable for the problem under study For many years linear models have been assumed with little or no testing of alternative specification The result has been models that force linearity assumptions on what clearly are nonlinear processes Another major assumption of much financial research constrains the coefficients to be stable over time This critical assumption has been attacked by Lucas 1976 on the grounds that when economic policy changes the coefficients of macroeconomics models change If this occurs any policy forecasts of these models will be flawed In financial modeling omitted possibly non quantifiable variables will bias coefficients While it may be possible to model some financial variables for extended periods in other periods the underlying models may either exhibit nonlinearity or show changes in linear models The authors research indicates that tests for changes in linear models such as recursive residual analysis or tests for episodic nonlinearity can be used to signal changes in the underlying structure of the market The book begins with a brief review of basic linear time series techniques that include autoregressive integrated moving average models ARIMA vector autoregressive models VAR and models from the ARCH GARCH class While the ARIMA and VAR approach models the first moment of a series models of the ARCH GARCH class model both the first moment and second moment which is interpreted as conditional or explained volatility of a series Recent work on nonlinearity detection has questioned the appropriateness of these essentially linear approaches A number of such tests are shown and applied for the complete series and a subsets of the series A major finding is that the structure of the series may change over time Within the time frame of a study there may be periods of episodic nonlinearity episodic ARCH and episodic nonstationarity Measures are developed to measure and relate these events both geographically and with mathematical models This book will be of interest to applied finance researchers and to market participants
