*One Billion Hungry* Gordon Conway, 2012-10-15 Hunger is a daily reality for a billion people. More than six decades after the technological discoveries that led to the Green Revolution aimed at ending world hunger, regular food shortages, malnutrition and poverty still plague vast swaths of the world. And with increasing food prices, climate change, resource inequality and an ever increasing global population, the future holds further challenges. In *One Billion Hungry*, Sir Gordon Conway, one of the world's foremost experts on global food needs, explains the many interrelated issues critical to our global food supply, from the science of agricultural advances to the politics of food security. He expands the discussion begun in his influential *The Doubly Green Revolution: Food for All in the Twenty First Century*, emphasizing the essential combination of increased food production, environmental stability and poverty reduction necessary to end endemic hunger on our planet. Conway addresses a series of urgent questions about global hunger: How we will feed a growing global population in the face of a wide range of adverse factors, including climate change. What contributions can the social and natural sciences make in finding solutions? And how can we engage both government and the private sector to apply these solutions and achieve significant impact in the lives of the poor? Conway succeeds in sharing his informed optimism about our collective ability to address these fundamental challenges, if we use technology paired with sustainable practices and strategic planning. Beginning with a definition of hunger and how it is calculated, and moving through issues topically, both detailed and comprehensive, each chapter focuses on specific challenges and solutions, ranging in scope from the farmer's daily life to the global movement of food, money and ideas. Drawing on the latest scientific research and the results of projects around the world, Conway addresses the concepts and realities of our global food needs, the legacy of the Green Revolution, the impact of market forces on food availability, the promise and perils of genetically modified foods, agricultural innovation in regard to crops, livestock, pest control, soil and water, and the need to both adapt to and slow the rate of climate change. *One Billion Hungry* will be welcomed by all readers seeking a multifaceted understanding of our global food supply, food security, international agricultural development and sustainability.

**The Reproach of Hunger** David Rieff, 2015-10-06 In 2000, the world's leaders and experts agreed that the eradication of hunger was the essential task for the new millennium. Yet in the last decade, the price of wheat, soya and rice have spiraled, seen by many as the cause of widening poverty gap and political unrest, from the Arab Spring to Latin America. This food crisis has condemned the bottom billion of the world's population, who live on less than \$1 a day, to a state of constant hunger. In *The Reproach of Hunger*, leading expert on humanitarian aid and development David Rieff goes in search of the causes of this food security crisis, as well as the failures to respond to the disaster. In addition to the failures to address climate change, poor governance and misguided optimism, Rieff cautions against the increased privatization of aid, with such organization as the Gates Foundation spending more than the WHO on food relief. The invention of the celebrity campaigner from Bono to Jeffrey Sachs, whose business led solutions have robbed development

of its political urgency The hope that the crisis of food scarcity of food production can be solved by a technological innovation In response Rieff demands that we rethink the fundamental causes of the world s grotesque inequalities and see the issue as a political challenge we are all failing to confront
