Non-chemical Weed Management Mahesh K. Upadhyaya, Robert E. Blackshaw, 2007 The increase in organic farming and concerns about potential negative effects on human health and the environment is creating a demand for pesticide free food and alternative weed management techniques. This book provides a comprehensive examination of non chemical weed management

Non-Chemical Weed Control Khawar Jabran, Bhagirath Chauhan, 2018-01-03 Non Chemical Weed Control is the first book to present an overview of plant crop protection against non food plants using non chemical means. Plants growing wild particularly unwanted plants found in cultivated ground to the exclusion of the desired crop have been treated with herbicides and chemical treatments in the past. As concern over environmental food and consumer safety increases research has turned to alternatives including the use of cover crops thermal treatments and biotechnology to reduce and eliminate unwanted plants. This book provides insight into existing and emerging alternative crop protection methods and includes lessons learned from past methodologies. As crop production resources decline while consumer concerns over safety increase the effective control of weeds is imperative to insure the maximum possible levels of soil sunlight and nutrients reach the crop plants. Allows reader to identify the most appropriate solution based on their individual use or case. Provides researchers students and growers with current concepts regarding the use of modern environment friendly weed control techniques. Presents methods of weed management an important part of integrated weed management in the future. Exploits the knowledge gained from past sustainable weed management efforts

Weed Management in Organic Rice Production P. Gnanasoundari, E. Somasundaram, U. Sivakumar, 2015-04-09 Rice is the staple food for millions of people in the Asia pacific region. 90% of the world's rice is grown and consumed in Asia. The indiscriminate use of chemicals in the rice environment thus polluting the fragile system has created an increasing awareness and interest among the rice farmers on organic farming. Weed infestation is regarded as one of the major causes of low crop yields throughout the world and can cause 50-60% reduction in grain yield under puddle conditions and 91% yield reduction in non puddled conditions. Organic weed control encourages weed suppression rather than elimination. This is done by promoting soil health through a combination of crop rotation, cover crops, biologically based bio fertilizers, compost and mulch. Proper management through organic methods offer varied benefits over chemical herbicides including increased

biodiversity improved soil nutrition and structure and protection of ground and surface water The present research work is aimed to confirm this possibility in weed control and evaluate the influence on yield performance in organic rice farming system employing non chemical weed management practices **Weeds, Pests and Diseases** ,2013 Non-chemical Weed Management in Rice (Oryza Sativa L.) Muhammad Yasir Riaz,Smi Ullah,Aqeel Afzal Khan,2012 A field trial to compare the non chemical weed management approach in dry direct seeded fine rice with the chemical methods was conducted at the Agronomic Research Farm University of Agriculture Faisalabad during Kharif 2009 The experiment was laid out in randomized complete block design RCBD with four replications Results revealed that manual weeding recorded maximum 99 % reduction in total weed density and dry weight Nominee 100SC suppressed weed density and dry weight by 75% over control Among non chemical weed management strategies soil incorporation of sorghum residues at 8 t ha⁻¹ accounted for 52 and 58 % reduction in above said weed attributes Maximum yield 4.17 t ha⁻¹ was recorded by manual weeding Manual weeding gave highest net benefits Rs 127217 ha⁻¹ while Nominee 100SC scored maximum 23076 % marginal rate of return
