## **Ordinal Measurement In The Behavioral Sciences:**

Ordinal Measurement in the Behavioral Sciences Norman Cliff, John A. Keats, 2003-01-30 This book provides an alternative method for measuring individual differences in psychological educational and other behavioral sciences studies. It is based on the assumptions of ordinal statistics as explained in Norman Cliff's 1996 *Ordinal Methods for Behavioral Data Analysis*. It provides the necessary background on ordinal measurement to permit its use to assess psychological and psychophysical tests and scales and interpret the data obtained. The authors believe that some of the behavioral measurement models used today do not fit the data or are inherently self-contradictory. Applications of these models can therefore lead to unwarranted inferences regarding the status of the derived variables. These methods can also be difficult to apply particularly in small sample contexts without making additional unrealistic assumptions. Ordinal methods more closely reflect the original data are simple to apply and can be used in samples of any size. The book's approach is in essence a return to simple empiricism in psychological measurement. *Ordinal Measurement in the Behavioral Sciences* provides methods for analyzing test responses extensive discussions of ordinal approaches to analyzing data that are judgments of stimuli methods for treating psychological data in ways consistent with its ordinal nature so as to stimulate new developments in this area and ordinal test theory and the unfolding methods that are applicable to cross cultural studies. Advanced students, researchers, and practitioners concerned with psychological measurement should find this book relevant. Measurement professionals will find it provides useful and simple methods that stimulate thought about measurement's real issues.

**Advances in Computerized Scoring of Complex Item Formats** Brian E. Claurier, 2014-07-16 This special issue was motivated by the move from research to operations for computerized delivery and scoring of complex constructed response items. The four papers presented provide an overview of the state of the art for such applications. The issue begins by describing the range of computer-delivered formats and computerized scoring systems that are currently in use. The remaining papers provide three views of validity in the context of computer-delivered and scoring assessments. It is hoped that together these articles will provide the reader with both an appreciation of the state of the art for computer-automated scoring systems as well as a perspective on the issues that must be considered and the evidence that must be collected to produce automated scoring systems that allow for valid inference.
