## Our Cosmic Ancestors:

Our Cosmic Ancestors Maurice Chatelain,1988 Our Cosmic Ancestors is a dynamic work unraveling the messages of these universal astronauts and decoding the symbols and visual mathematics they have left for us in the Egyptian Pyramids Stonehenge the Mayan calendar the Maltese Cross and the Sumerian zodiac The book is captivating reading from beginning to end However Mr Chatelain s purpose in sharing these exciting discoveries lies in the hope that all humans will extend their horizons to release fear of the unknown just enough that another generation will exhibit growing curiosity to continue the search for signs of purposeful nurturing of this planet *The Search For Our Cosmic Ancestry* Nalin Chandra

Wickramasinghe,2014-10-21 The idea that life is a cosmic rather than a purely terrestrial phenomenon has progressed from scientific heresy to mainstream science within the short timespan of a few decades The theory of cometary panspermia developed by Fred Hoyle and the present author in the 1970 s has been vindicated by a spate of new discoveries in astronomy and biology and also with startling new evidence of microbial fossils in meteorites and micrometeorites The recent Kepler Telescope searches for exoplanets have indicated the presence of over 100 billion habitable planets separated by only a few light years thus making panspermia and the transfer of microbial life between such planets an inevitable fact The book presents a comprehensive and up to date account of the Hoyle Wickramasinghe theory of cometary panspermia in a manner accessible to a wide general readership Our Cosmic Ancestry: Origins, Evolution, Metamorphosis of Life from Other Planets Rhawn Gabriel Joseph,2013-06-12

If life were to suddenly appear on a desert island we wouldn t claim it was randomly assembled in an organic soup or created by the hand of god we d conclude it washed to shore or fell from the sky The Earth too is an island orbiting in a sea of space and living creatures and their DNA have been washing to shore and falling from the sky since our planets creation Joseph 2000 What has taken place on Earth represents not a random evolution but the metamorphosis and replication of living creatures which long ago lived on other planets Joseph 2000 Our ancient ancestors and their genes journeyed here from the stars Joseph 1997 The discoveries and theories detailed in this text can be summarized as follows 1 Life on Earth has extraterrestrial origins 2 These extraterrestrials are descendants of prokaryotes and eukaryotes which had long ago fallen unto other planets where they engaged in interplanetary horizontal gene exchange 3 The genetic information for the evolution of life on Earth has extraterrestrial origins 4 Once on Earth extraterrestrial genes including silent genes and the genetic material for the generation of additional genes were transferred into the eukaryotic genome from viruses and bacteria which fell to Earth and 5 and their DNA contained all the genetic information necessary for the evolution of every species which has walked crawled swam or slithered across this planet including species which never evolved on Earth 6 Over the course of evolution on Earth various species with their libraries of extraterrestrial genetic information genetically and biologically altered the environment via the liberation or secretion of oxygen and calcium and other substances which 7 acted on gene selection leading to new species adapted to a world which had been genetically

engineered for their survival 8 When sufficient oxygen calcium etc had been secreted and with the formation of the ozone layer silent and other genes were activated giving rise to the Cambrian explosion 9 and the evolution of the eye brain and skeletal system 10 Bacteria archae and viruses and perhaps even more complex species continually fall from space and 11 continue to insert genes via horizontal gene transfer into the eukaryotic genome 12 All these factors explain the step wise punctuated equilibrium which characterizes evolution on this planet leading to the multi regional evolution and metamorphosis of numerous species of human which indicates 13 Earth was genetically seeded to grow every species which has appeared on Earth culminating in woman and man 14 according to the genetic principles of evolutionary metamorphosis

have on our relationship with the Earth and on culture history and religion And perhaps the most dramatic ramification of all is that acceptance of panspermia means acceptance that Earth is not unique that other life filled planets exist and intelligent life is common in the Universe Not only did we come from space but we are not alone **Mayan Kingdom** A.J.
