Panic Disorder A Critical Analysis:

Panic Disorder Richard J. McNally, 1994-08-05 In recent years panic disorder has become one of the most researched syndromes in psychopathology. It has also been a topic of intense controversy with sharp disagreements along disciplinary lines among biological psychiatrists, behavioral psychologists, and epidemiologists concerning its syndromal validity, epidemiology, etiology, and treatment. Filling the need for a balanced in-depth analysis of the most current research and theory on all aspects of the syndrome, this unique volume provides a comprehensive integrative exploration of panic disorder. Maintaining throughout that panic disorder is a psychobiological syndrome characterized by dysfunction at the cognitive as well as the physiological level, the book begins with a discussion of the phenomenology of the disorder that covers Origins of the panic disorder concept, The evolution of panic disorder in DSM III, DSM III-R, and DSM IV, Qualitative distinctions between panic, anxiety, and fear, Alternative subtyping schemes, Variants of panic, Direct assessment, Extensive reviews of the epidemiology, biological aspects, and psychopharmacologic treatments are presented in subsequent chapters, followed by detailed explorations of psychological aspects including predictability and controllability, and psychological treatments including cognitive-behavioral techniques. A thorough discussion of the syndromal validity and etiology of the disorder is provided, and metatheoretical issues such as the cross-cultural and philosophical aspects of the disorder are also addressed. The final chapter presents conclusions about the current knowledge of panic and looks toward future developments. An important resource for all psychologists, psychiatrists, mental health professionals, and researchers interested in panic disorder, this book will also be a valuable text for psychiatry residents, medical students, and graduate students in clinical and counseling psychology.

Panic Disorder Stanley Rachman, Padmal De Silva, 2004 Panic disorder is a remarkably common psychological condition characterized by sudden attacks of intense fear and panic. Approximately 3% of the population will experience some signs of panic disorder during their lifetime. It is a very distressing condition and if it persists has an adverse effect on most aspects of the person's life. This new edition of *Panic Disorder: The Facts* includes valuable new information on treatment and discusses the relationship between panic disorder and other anxiety conditions. It also assesses the evidence for the available treatments, drawing from the latest scientific research. Information on self-help has also been revised. Up-to-date information on the nature, symptoms, causes, theories, and treatment of panic disorder is provided in a non-technical language. The chapters on treatment give a detailed account of psychological therapy and also discuss drug treatment. A final chapter answers some commonly asked questions. Numerous personal accounts are given throughout the book, highlighting various aspects of panic disorder and its treatment. Though mainly intended for sufferers of panic disorder and their families and friends, it will also be of interest to the general reader and to health care workers who have to deal with this problem. Clearly written by two leading experts, the book will remain a valuable source of information for anyone affected by this disorder.

Sanfelippo, 2006 Panic disorder is characterised by unexpected and repeated episodes of intense fear accompanied by physical symptoms that may include chest pain heart palpitations shortness of breath dizziness or abdominal distress These sensations often mimic symptoms of a heart attack or other life threatening medical conditions As a result the diagnosis of panic disorder is frequently not made until extensive and costly medical procedures fail to provide a correct diagnosis or relief Many people with panic disorder develop intense anxiety between episodes It is not unusual for a person with panic disorder to develop

phobias about places or situations where panic attacks have occurred such as in supermarkets or other everyday situations As the frequency of panic attacks increases the person often begins to avoid situations where they fear another attack may occur or where help would not be immediately available This avoidance may eventually develop into agoraphobia an inability to go beyond known and safe surroundings because of intense fear and anxiety This new book brings together leading research in the field from throughout the world Anxiety, Gut Microbiome, and Nutraceuticals Yashwant V.
