Partially Integrable Evolution Equations in Physics R. Conte,N. Boccara,2012-12-06 In the many physical phenomena ruled by partial differential equations two extreme fields are currently overcrowded due to recent considerable developments 1 the field of completely integrable equations whose recent advances are the inverse spectral transform the recursion operator underlying Hamiltonian structures Lax pairs etc 2 the field of dynamical systems often built as models of observed physical phenomena turbulence intermittency Poincare sections transition to chaos etc In between there is a very large region where systems are neither integrable nor nonintegrable but partially integrable and people working in the latter domain often know methods from either 1 or 2 Due to the growing interest in partially integrable systems we decided to organize a meeting for physicists active or about to undertake research in this field and we thought that an appropriate form would be a school Indeed some of the above mentioned methods are often adaptable outside their original domain and therefore worth to be taught in an interdisciplinary school One of the main concerns was to keep a correct balance between physics and mathematics and this is reflected in the list of courses

Continuous Symmetries and Integrability of Discrete Equations Decio Levi,Pavel Winternitz,Ravil I. Yamilov,2023-01-23 This book on integrable systems and symmetries presents new results on applications of symmetries and integrability techniques to the case of equations defined on the lattice This

relatively new field has many applications for example in describing the evolution of crystals and molecular systems defined on lattices and in finding numerical approximations for differential equations preserving their symmetries The book contains three chapters and five appendices The first chapter is an introduction to the general ideas about symmetries lattices differential difference and partial difference equations and Lie point symmetries defined on them Chapter 2 deals with integrable and linearizable systems in two dimensions The authors start from the prototype of integrable and linearizable partial differential equations the Korteweg de Vries and the Burgers equations Then they consider the best known integrable differential difference and partial difference equations Chapter 3 considers generalized symmetries and conserved densities as integrability criteria The appendices provide details which may help the readers understanding of the subjects presented in Chapters 2 and 3 This book is written for PhD students and early researchers both in theoretical physics and in applied mathematics who are interested in the study of symmetries and integrability of difference equations

KdV '95 Michiel Hazewinkel,Hans W. Capel,Eduard M. de Jager,2012-12-06 Exactly one hundred years ago in 1895 G de Vries under the supervision of D J Korteweg defended his thesis on what is now known as the Korteweg de Vries Equation They published a joint paper in 1895 in the Philosophical Magazine entitled On the change of form of long waves advancing in a rectangular canal and on a new type of long stationary wave and for the next 60 years or so no other relevant work seemed to have been done In the 1960s however research on this and related equations exploded There are now some 3100 papers in mathematics and physics that contain a mention of the phrase Korteweg de Vries equation in their title or abstract and there are

thousands more in other areas such as biology chemistry electronics geology oceanology meteorology etc And of course the KdV equation is only one of what are now called Liouville completely integrable systems The KdV and its relatives continually turn up in situations when one wishes to incorporate nonlinear and dispersive effects into wave type phenomena This centenary provides a unique occasion to survey as many different aspects of the KdV and related equations The KdV equation has depth subtlety and a breadth of applications that make it a rarity deserving special attention and exposition
