Introduction to Cataloging and Classification

Daniel N. Joudrey, Arlene G. Taylor, David P. Miller, 2015-09-29 A new edition of this best selling textbook reintroduces the topic of library cataloging from a fresh modern perspective. Not many books merit an eleventh edition but this popular text does. Newly updated *Introduction to Cataloging and Classification* provides an introduction to descriptive cataloging based on contemporary standards explaining the basic tenets to readers without previous experience as well as to those who merely want a better understanding of the process as it exists today. The text opens with the foundations of cataloging then moves to specific details and subject matter such as Functional Requirements for Bibliographic Records (FRBR), Functional Requirements for Authority Data (FRAD), the International Cataloging Principles (ICP), and RDA. Unlike other texts the book doesn't presume a close familiarity with the MARC bibliographic or authorities formats, ALA's Anglo American Cataloging Rules 2nd Edition, revised AACR2R, or the International Standard Bibliographic Description (ISBD). Subject access to library materials is covered in sufficient depth to make the reader comfortable with the principles and practices of subject cataloging and classification. In addition the book introduces MARC BIBFRAME and other approaches used to communicate and display bibliographic data. Discussions of formatting, presentation, and administrative issues complete the book. Questions useful for review and study appear at the end of each chapter.
