Microwaves In The Food Processing Industry Food Science And Technology:

Electromagnetic Technologies in Food Science Vicente M. Gómez-López, Rajeev Bhat, 2021-12-13 A comprehensive source of in depth information provided on existing and emerging food technologies based on the electromagnetic spectrum Electromagnetic Technologies in Food Science examines various methods employed in food applications that are based on the entire electromagnetic EM spectrum Focusing on recent advances and challenges in food science and technology this is an up to date volume that features vital contributions coming from an international panel of experts who have shared both fundamental and advanced knowledge of information on the dosimetry methods and on potential applications of gamma irradiation electron beams X rays radio and microwaves ultraviolet visible pulsed light and more Organized into four parts the text begins with an accessible overview of the physics of the electromagnetic spectrum followed by discussion on the application of the EM spectrum to non thermal food processing The physics of infrared radiation microwaves and other advanced heating methods are then deliberated in detail supported by case studies and examples that illustrate a range of both current and potential applications of EM based methods The concluding section of the book describes analytical techniques adopted for quality control such as hyperspectral imaging infrared and Raman spectroscopy This authoritative book resource Covers advanced theoretical knowledge and practical applications on the use of EM spectrum as novel methods in food processing technology Discusses the latest progress in developing quality control methods thus enabling the control of continuous fast speed processes Explores future challenges and benefits of employing electromagnetic spectrum in food technology applications Addresses emerging processing technologies related to improving safety preservation and overall quality of various food commodities Electromagnetic Technologies in Food Science is an essential reading material for undergraduate and graduate students researchers academics and agri food professionals working in the area of food preservation novel food processing techniques and sustainable food production [Minimal Processing Technologies in the Food Industries](#) T Ohlsson, N Bengtsson, 2002-07-26 The emergence of minimal processing techniques which have a limited impact on a food s nutritional and sensory properties has been a major new development in the food industry This book provides an authoritative review of the range of minimal techniques currently available their applications and safety and quality issues Reviews the range of minimal processing techniques their advantages and disadvantages and their use in food production Discusses the range of thermal technologies such as infrared heating ohmic heating and dielectric methods including the use of microwaves Presents alternatives to thermal processing ranging from irradiation to high pressure processing and the use of pulsed electric fields **The Microwave Processing of Foods** Marc Regier, Kai Knoerzer, Helmar Schubert, 2016-11-01 The Microwave Processing of Foods Second Edition has been updated and extended to include the many developments that have taken place over the past 10 years Including new chapters on microwave assisted frying microwave assisted microbial inactivation microwave assisted disinfestation this book continues to provide the basic

principles for microwave technology while also presenting current and emerging research trends for future use development. Led by an international team of experts, this book will serve as a practical guide for those interested in applying microwave technology. Provides thoroughly up to date information on the basics of microwaves and microwave heating. Discusses the main factors for the successful application of microwaves and the main problems that may arise. Includes current and potential future applications for real world application as well as new research and advances. Includes new chapters on microwave assisted frying, microbial inactivation and disinfestation.

Microwave Processing of Foods: Challenges, Advances and Prospects Anubhav Pratap Singh, Ferruh Erdogdu, Shaojin Wang, Hosahalli S. Ramaswamy, 2024-08-27. The application of microwaves has been a major advancement in food processing over the past 50 years and yet to date there have been very few publications focusing exclusively on microwave processing and none covering the latest technological and theoretical advances. *Microwave Processing of Foods: Challenges, Advances and Prospects* fills this gap by covering all aspects of the microwave processing of foods including the latest novel advances in this fast moving subject area. This text presents multidisciplinary views of novel microwave systems, novel process modeling, engineering and design as well as practical approaches on methodology and findings regarding the effect of microwave on the food quality and process safety. The volume comprises several chapters on the newest processing and machinery aspects, engineering design and process modeling, process safety and novel processes based on full or partial application of microwave in food processing. This book also considers economic aspects, food quality issues and future trends of microwave application in the food industry. Each chapter in this text functions as a critical review presenting the current state of knowledge based on the personal experience of the authors and the current state of published research in one particular area of food processing. While the main focus is on processing, the physical principles and the chemical and microbiological basis of the process are also covered, plus the impact of the technology on the quality and safety of food. This book presents a comprehensive and fully up to date reference on the principles and applications of microwave processing of food products.

Handbook of Food Science, Technology, and Engineering Yiu H. Hui, 2006. *Microwaves in the Food Processing Industry* Robert V. Decareau, Richard E. Mudgett, 1985. Background of the development of microwave heating technology. Dielectric properties of food. Richard E. Mudgett. Modeling microwave heating characteristics. Richard E. Mudgett. Conveyorized microwave equipments. Dehydration. Freeze drying. Processing of meat and meat products. Blanching. Baking. Thawing. Pasteurization and sterilization. Future prospects for microwave processing. Where do we go from here.

Advances in Thermal and Non-Thermal Food Preservation Gaurav Tewari, Vijay Juneja, 2008-02-28. *Advances in Thermal and Non Thermal Food Preservation* provides current definitive and factual material written by experts on different thermal and non thermal food preservation technologies. Emphasizing inactivation of microorganisms through the application of traditional as well as newer and novel techniques and their combinations, the book's chapters cover thermal food preservation techniques e.g. retorting, UHT and aseptic processing.

minimal thermal processing e g sous vide processing and non thermal food preservation techniques e g high pressure processing and pulsed technologies Editors Tewari and Juneja give special emphasis to the commercial aspects of non conventional food preservation techniques As the most comprehensive and contemporary resource of its kind Advances in Thermal and Non Thermal Food Preservation is the definitive standard in describing the inactivation of microorganisms through conventional and newer more novel techniques *Encyclopedia of Food Science and Technology* ,1991
