Clinical Neuropsychology I believe there is much to recommend this hefty volume It is a solid reference that I can see appreciating as a resource as I update my training bibliography Journal of the International Neuropsychological Society This landmark reference covers all aspects of pediatric neuropsychology from a research based perspective while presenting an applied focus with practical suggestions and guidelines for clinical practice Useful both as a training manual for graduate students and as a comprehensive reference for experienced practitioners it is an essential resource for those dealing with a pediatric population This handbook provides an extensive overview of the most common medical conditions that neuropsychologists encounter while dealing with pediatric populations It also discusses school based issues such as special education law consulting with school staff and reintegrating children back into mainstream schools It contains over 100 well respected authors who are leading researchers in their respective fields Additionally each of the 95 chapters includes an up to date review of available research resulting in the most comprehensive text on pediatric neuropsychology available in a single volume Key Features Provides thorough information on understanding functional neuroanatomy and development and on using functional neuroimaging Highlights clinical practice issues such as legal and ethical decision making dealing with child abuse and neglect and working with school staff Describes a variety of professional issues that neuropsychologists must confront during their daily practice such as ethics multiculturalism child abuse forensics and psychopharmacology

Viewing Violence Madeline Levine, 1996 Psychologist and mother Madeline Levine looks at the history of television and movie violence in the United States She translates into everyday language the results of over four decades of research on the effects of media violence research that up until now has been inaccessible to most parents Using a developmental approach Dr Levine helps parents understand that children at different ages think about understand and experience the world in very different ways An appreciation of these differences in how children see things is critical if parents are to make wise choices about what is appropriate and what is potentially harmful to their children Using research findings common sense and personal experience Dr Levine demonstrates that violence is not generic and neither are children the movie that may be instructive and appropriate for an eleven year old may be traumatic and overwhelming for a seven year old Parents frequently underestimate the impact of violent television on their children and may be surprised at what children find upsetting Dr Levine argues that the issue of media violence is not trivial that our society is increasingly at risk not only for higher levels of violence but for a greater tolerance and acceptance of this violence In spite of efforts from both sides of the political spectrum to claim media violence as a political issue Dr Levine insists this is a parenting and citizenship issue She looks at how parents government schools and the media itself can best approach the problem The book concludes with a list of resources to help parents become active in media reform **BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved** [Handbook of Gender Research in Psychology](#) Joan C. sex differences are as old as the field of psychology and they have been conducted in every sub field of the discipline. There are probably many reasons for the popularity of these studies but three reasons seem to be most prominent. First social psychological studies of person perception show that sex is especially salient in social groups. It is the first thing people notice about others and it is one of the things we remember best (Fiske, Haslam, Stangor, Lynch, Duan, Glass, 1992). For example, people may not remember who uttered a witty remark but they are likely to remember whether the quip came from a woman or a man. Second, many people hold firm beliefs that aspects of physiology suit men and women for particular social roles. Men's greater upper body strength makes them better candidates for manual labor and their greater height gives the impression that they would make good leaders (i.e., people we look up to). Women's reproductive capacity and the caretaking tasks (e.g., breastfeeding, baby minding) that accompany it make them seem suitable for other roles that require gentleness and nurturance. Third, the logic that underlies hypothesis testing in the sciences is focused on difference. Researchers design their studies with the hope that they can reject the null hypothesis that experimental groups do not differ.

Coping and the Development of Regulation (Ellen A. Skinner, Melanie J. Zimmer-Gembeck, 2009-06-22) A developmental conceptualization that emphasizes coping as regulation under stress opens the way to explore synergies between coping and regulatory processes including self regulation, behavioral emotion, attention and action regulation, ego control, self control, compliance and volition. This volume with chapters written by experts on the development of regulation and coping during childhood and adolescence is the first to explore these synergies. The volume is geared toward researchers working in the broad areas of regulation, coping, stress, adversity and resilience. For regulation researchers it offers opportunities to focus on age graded changes in how these processes function under stress and to consider multiple targets of regulation simultaneously. Emotion, attention, behavior that typically are examined in isolation. For researchers interested in coping this volume offers invigorating theoretical and operational ideas. For researchers studying stress, adversity and resilience this volume highlights coping as one pathway through which exposure to adversity shapes children's long term development. The authors also address cross cutting developmental themes such as the role of stress, coping and social relationships in the successive integration of regulatory subsystems, the emergence of autonomous regulation and the progressive construction of the kinds of regulatory resources and routines that allow flexible constructive coping under successively higher levels of stress and adversity. All chapters emphasize the importance of integrative multilevel perspectives in bringing together work on the neurobiology of stress, temperament, attachment, regulation, personal resources, relationships, stress exposure and social contexts in studying processes of coping, adversity and resilience.
