[The Titanic Effect](#) Todd Saxton,M. Kim Saxton,Michael Cloran,2019-03-05 I have read dozens of books on starting companies but this is the first that accurately captures why startups fail and provides a tool for entrepreneurs and investors to measure and manage these sources of failure Michael Hatfield Co Founder Cerent Calix Cienna and Carium What makes a startup successful This book from award winning business school professors and a tech serial entrepreneur tells what makes startups successful Instead of telling startups what to do like most startup books they share what startups should avoid Along the way they share small business startup success stories gleaned from the How Built This Podcast and their firsthand experiences These stories of startup success are contrasted with stories of startup failure from startup graveyards and most notably the Titanic Like many of today s startups the Titanic hoped to disrupt the transportation industry of its time It fell short to a disastrous outcome from the same sources that prevent startup success today Get a startup game plan This startup book uses

the Titanic and a sailing metaphor to provide a startup roadmap template It shows what makes startups successfully navigate through challenges in startup investing founding and hiring with a game plan to get through the Human Ocean It offers a startup guide to customer success in working through the Marketing Ocean It even highlights what startups need to invest in to get through the Technical and Strategy Oceans Its Iceberg Index gives entrepreneurs startups and small businesses a way to track their progress on the startup roadmap template It also helps investors assess what startups to invest in Many entrepreneurs assume that the Titanic was sunk by a single iceberg The Titanic Effect shows that like many startups it s not a single misstep but a series of mistakes that keep a startup from being successful This combination of missteps is called the Titanic Effect Who can benefit from this startup roadmap Entrepreneurs in the early stages of building a startup They will learn what makes a startup successful They will develop a to do list of decisions to make and actions to take Small business owners will also identify key next steps to building their startup game plan Investors can identify what to avoid in startup investments and what startups to invest in Students will learn how to evaluate the success potential of a startup and will read small business and startup success stories These three co authors have witnessed firsthand what leads to startup success They have made it their mission to help entrepreneurs startup founders and startup investors succeed Drs Todd and M Kim Saxton bring more than two decades of academic and professional experience in business strategy entrepreneurship marketing and angel investing Serial tech entrepreneur Michael Cloran adds his two decades of experiences in launching his own startups as well as building software products for other startups In addition the co authors serve on various boards of entrepreneurial ventures and startup advisory associations They have shared their expertise from the stage to dozens of audiences including students entrepreneurship and professional development associations academic societies and global companies like Roche Diagnostics and Pfizer Pharmaceuticals

Leadership: Reinventing Management When There's No More Business as Usual Rajeev Peshawaria, 2017-10-27 From taxi rides hotel stays car driving to communicating and paying everything we knew as normal has changed beyond recognition To lead effectively in today's brave new world you have to question EVERYTHING For the first time in human history knowledge is free and almost every boundary to communication has been lifted This open source world has permanently altered the business landscape And you can count on the fact that the pace of change will only accelerate Yet companies still rely on management tools and practices that were at best mildly effective in their heyday In *Open Source Leadership* Rajeev Peshawaria reveals the vision insight and practices he has used to help some of today's largest and most influential organizations meet the open source world head on It all starts with asking the right questions What's the most effective leadership style in a world of 24/7 connectivity How has the very concept of leadership changed in the open source era How do you inspire and reward performance in the gig economy How do you measure engagement and effectively address the gaps How can you lead innovation quickly and continuously Peshawaria reveals the answers to these questions and they will surprise you Based on his company's groundbreaking research spanning 28 countries he concludes that traditional industrial age thinking needs a massive upgrade to successfully navigating the brave new world of business *Open Source Leadership* rewrites the rules of management giving you a unique look at the most common misperceptions illusions and downright wrong information you've been getting about what works and what doesn't It provides a new counterintuitive model for seizing competitive edge in any industry Among other issues the book argues convincingly that positive autocracy must replace democratic leadership talent and innovation are abundant not scarce early identification of high potentials is counterproductive and setting employees free to do as little as they want will increase productivity Television/radio Age, 1978

Operational and Economical Perspectives on Consumer Returns Gülay Samatli-Paç, 2013 Customer return policies are

one of common after sale services offered by a retailer in order to boost sales improve customer satisfaction and diminish customer fit uncertainty With such a service the retailer accepts the return of a product after the sale has occurred if it does not satisfy the customer s expectations This study investigates consumer returns from three different perspectives First we start with a single period inventory planning problem of multi variants in which customers have a right to return products in case of dissatisfaction We assume that returns can be as good as new condition after a minor restocking process and they are resalable in the same selling period At the time of purchasing a customer may choose to substitute her choice with another variant of the item if the former is sold out This so called substitution and resalable returns are important parameters in assortment planning that might affect the total profit dramatically Under this setting we aim to illustrate the effect of return and substitution on the optimal order quantities of variants and the total expected profit We show that the total profit decreases as the probability of returns or the probability of resalable returns increases In addition the probability of substitution return or resalable return has a negative effect on inventory level of variants Second we analyze a retailer s return policy problem when the market consists of loss averse customers who are more sensitive to losses than gains instead of being risk neutral customers We examine the situation in which a seller makes price and quantity decisions for a single item and also designs an appropriate returns policy in order to maximize his profit We analyze the case where the seller offers either a full refund or a partial refund policy if he decides to accept returns or chooses not to accept any returns With the full refund policy the seller reimburses the consumer the full price of the product if it does not fit the customer s preferences With a partial refund policy the seller offers a refund which is strictly less than the purchase price We assume that customers are strategic customers aiming to maximize their utilities of the product With this model we aim to analyze the impact of loss aversion on the seller s price and order quantity decisions We show that the seller keeps fewer inventories as customers get more loss averse and loss aversion has a negative effect on the expected unit profit Thus the total profit decreases as loss aversion Finally we present a model that investigates the effects of return policies on each of the two sellers pricing decisions when these sellers engage in market size competition Our model simultaneously addresses a consumer s purchase decision and the competing sellers price decisions along with their respective return policies We assume that two competing sellers which do not have a capacity problem only decide their prices and return policies The sellers may independently offer no refund full refund of the price of the product or a partial refund The market share of each party depends on his and the rival s price and return policy customer valuations of the product and the degree of competition between the sellers Before purchasing a consumer cannot evaluate the product s utility which is a decreasing function of the price set by the seller from which she chooses to purchase it and the disutility of purchase and or return which is related to the physical distance between the consumer and the seller s location The return policy of a seller may also affect a consumer s decision via her expected utility Thus pricing and return policy decisions play an important role in the division of the total

market We show that the full refund policy yields a higher purchasing price compare to the no refund or partial refund policy However it only performs better in terms of profit when the product has a small salvage value and a partial refund policy is not an option for the retailer When the retailer offers the partial refund policy it always dominates the other refund policies In addition we show that the full refund policy provides the highest consumer surplus since customers do not face any risk of misfit On the other hand the full refund policy is socially efficient only when the salvage value is high For low salvage values the partial refund policy yields a higher level of social welfare

Refund Or Not? Joint Pricing and Refund Optimization for Omnichannel Retailing with Product Returns Yi Meng Sun,2023

Problem definition We consider an omnichannel retailer selling multiple substitutable products through an online channel and a physical store Online purchases can be returned either by mail or to the physical store The retailer decides each product s price and refund value for each channel to maximize his expected profit

Methodology results We capture a consumer s sequential decisions on making a purchase and potentially returning her product using a generalized Markovian logit choice MLC model We use this model to formulate a joint pricing and refund optimization problem for the retailer If there are no constraints on prices and refund values this problem is convex and we obtain analytical expressions of its optimal solution Otherwise the problem may become non convex and we approximate it using a mixed integer linear program We estimate the generalized MLC model using transaction data that may only be partially observable making our framework applicable to a data driven setting Numerical experiments using synthetic data demonstrate that our estimation and optimization framework based on this generalized MLC model fits a general data set well and produces competitive results A case study using data with some unobservable consumer choices from a major fashion retailer demonstrates that our joint pricing and refund optimization approach significantly outperforms heuristics commonly used in practice

Managerial implications To benefit from return policies the retailer needs to guarantee good quality or non negative online or offline return social welfare for each product Under the cross channel substitution effect the optimal online and offline prices can move in opposite directions and the rise of any product s offline cost makes the retailer more willing to offer the return policies for online purchases
