Electric Vehicle Business Models David Beeton, Gereon Meyer, 2014-12-27 This contributed volume collects insights from industry professionals, policy makers and researchers on new and profitable business models in the field of electric vehicles EV for the mass market. This book includes approaches that address the optimization of total cost of ownership. Moreover, it presents alternative models of ownership financing and leasing. The editors present state of the art insights from international experts including real world case studies. The volume has been edited in the framework of the International Energy Agency's Implementing Agreement for Cooperation on Hybrid and Electric Vehicles IA HEV. The target audience primarily comprises practitioners and decision makers, but the book may also be beneficial for research experts and graduate students.

E-Mobility in Europe Walter Leal Filho, Richard Kotter, 2015-04-27 Focusing on technical policy and social societal practices and innovations for electrified transport for personal, public and freight purposes, this book provides a state of the art overview of developments in e-mobility in Europe and the West Coast of the USA. It serves as a learning base for further implementing and commercially developing this field for the benefit of society, the environment and public health, as well as for economic development and private industry. A fast growing interdisciplinary sector, electric mobility links engineering, infrastructure, environment, transport and sustainable development. But despite the relevance of the topic, few publications have ever attempted to document or promote the wide range of electric mobility initiatives and projects taking place today. Addressing this need, this publication consists of case studies, reports on technological developments and examples of successful infrastructure installation in cities, which document current initiatives and serve as an inspiration for others.

Organisational Behaviour and Design Alessandra Ricciardelli, Marco Valeri, 2025-04-21 This book focuses on conceptual frameworks, debates, tools and developments in the fields of organizational behaviour and organizational design. It analyses the concepts related to organizational behaviour, such as leadership, organizational climate and motivation, at one side, and focuses on the general framework for organizational design in detail, in all its components: strategy, environment, processes, people, leadership, information and knowledge system, etc. At the other side, the analysis of the psychological factors affecting organizational design also drives to think of possible different configurations of the main components of organizational structure and design that may be a good fit between behaviour and design. In the Industry 4.0 era, human resources and personal factors are increasingly central and strategic; therefore, it is important to understand how psychological factors affect organizational design. It provides a practical guidance on this area of study for developing and implementing the desired organizational architecture. Hence, it takes a managerial perspective to identify practices and behaviour resulting in meaningful and satisfying organizational experience, vis-à-vis the evolving nature of structures and contexts. The book broadens readers' understanding of the role of organizational behavior and design issues in organizational performance while focusing on design changes to remedy organization's core problems. Given these premises, it will be of

interest to scholars and professionals in the field of organizational behaviour job design and job crafting strategic management and studies at large who can contribute to organizations evolution towards more harmonious organizational design configurations
