Alternative Fuel News ,2003 #TaxmannAnalysis | Taxability of EV Charging Stations from a GST

Perspective Taxmann,2022-03-07 In its clarification relating to the requirement of licensing by the charging stations under the Electricity Act 2003 the Ministry of Power clarified that charging of an EV battery by a charging station involves a service requiring the consumption of electricity by the charging station If one adopts the above position under GST charging will attract GST at 18% However if treated as a sale of electricity the supply of electrical energy would be exempted from GST The solitary question that arises in the given case in the context of GST is whether the charging of a battery is an activity of supply of electricity as goods and thus exempted from GST or it is an overall charging service by the charging station which would be subject to GST at the rate of 18% Read Taxmann s Research and Advisory Team s Analysis to know more

The Energy Disruption Triangle David C. Fessler, 2019-01-22. A real world guide for adapting to the new energy era. The Energy Disruption Triangle is a treatise on the energy revolution's real world impacts and a handbook for anyone looking to weather the storm. Three major technologies are already changing the energy paradigm: solar energy, electric vehicles, and energy storage. As technology continues to evolve and become more accessible to the masses, the nation's energy habits will experience a dramatic upheaval. This book provides actionable guidance to help you adapt. We are already in the beginning stages of this black swan event, and most people don't know what's coming, but it will come much sooner and much faster than anyone thinks. This book reveals the revolution happening right before our eyes and shows you how to thrive in this new era. Learn how our energy supplies and usage are changing. Understand why energy storage matters and how the technology is evolving. Explore the history and future of groundbreaking energy technologies. Delve into the disruption of the U.S. energy supply and the possibility of energy independence. Rapidly advancing battery technology is boosting energy storage for homeowners, utilities, and electric vehicle manufacturers, stranding fossil fuels in the ground due to the high price of extraction relative to cost-effective sources such as solar and wind. Traditional energy sources are being phased out, and our nation has come to a fork in the road: uphold the status quo and allow our energy supply to be disrupted, or adapt and advance to a state of total energy independence. The Energy Disruption Triangle explores the state of U.S. energy from source to consumer and provides insight into the three sectors that are changing the world.
