*Teaching Mathematics Through Games* Mindy Capaldi, 2021-05-18 Active engagement is the key to learning. You want your students doing something that stimulates them to ask questions and creates a need to know. *Teaching Mathematics Through Games* presents a variety of classroom tested exercises and activities that provoke the active learning and curiosity that you hope to promote. These games run the gamut from well known favorites like SET and Settlers of Catan to original games involving simulating structural inequality in New York or playing Battleship with functions. The book contains activities suitable for a wide variety of college mathematics courses including general education courses, math for elementary education, probability, calculus, linear algebra, history of math, and proof based mathematics. Some chapter activities are short term such as a drop in lesson for a day and some are longer including semester long projects. All have been tested, refined, and include extensive implementation notes.

*Mathematics of Finance* Donald G. Saari, 2019-08-31 This textbook invites the reader to develop a holistic grounding in mathematical finance where concepts and intuition play as important a role as powerful mathematical tools. Financial interactions are characterized by a vast amount of data and uncertainty. Navigating the inherent dangers and hidden opportunities requires a keen understanding of what techniques to apply and when. By exploring the conceptual foundations of options pricing, the author equips readers to choose their tools with a critical eye and adapt to emerging challenges. Introducing the basics of gambles through realistic scenarios, the text goes on to build the core financial techniques of Puts, Calls, hedging, and arbitrage. Chapters on modeling and probability lead into the centerpiece, the Black-Scholes equation. Omitting the mechanics of solving Black-Scholes itself, the presentation instead focuses on an in-depth analysis of its derivation and solutions. Advanced topics that follow include the Greeks, American options, and embellishments. Throughout the author presents topics in an engaging, conversational style. Intuition breaks frequently prompt students to set aside mathematical details and think critically about the relevance of tools in context. *Mathematics of Finance* is ideal for undergraduates from a variety of backgrounds including mathematics, economics, statistics, data science, and computer science. Students should have experience with the standard calculus sequence as well as a familiarity with differential equations and probability. No financial expertise is assumed of student or instructor; in fact, the text's deep connection to mathematical ideas makes it suitable for a math capstone course. A complete set of the author's lecture videos is available on YouTube, providing a comprehensive supplementary resource for a course or independent study.
