A Tightly-Coupled INS/GPS Integration Using a MEMS IMU Jonathan M. Neu,2004-09-01 Micro Electro Mechanical Systems MEMS technology holds great promise for future navigation systems because of the reduced size and cost of MEMS inertial sensors relative to conventional devices Current MEMS devices are much less accurate than standard inertial sensors but they can still be useful In this thesis data was recorded from an inexpensive MEMS inertial measurement unit and integrated with GPS measurements using a tightly coupled Kalman filter The overall goal of this research is to investigate the usefulness of MEMS sensors for a small real time low cost INS GPS integration A golf cart was used to collect dynamic data along with a commercial INS GPS system to provide reference data This data was then post processed and the filter s performance in the position velocity and attitude outputs were evaluated by comparing them to the reference system The important system features of system alignment bias feedback and INS resets are described and the filter s performance is analyzed using its estimate and covariance outputs and comparing them to the true error Filter residuals are also shown and discussed The final results show that with adequate processing available the INS GPS filter using the MEMS instruments provides good position velocity and attitude results over a period of up to 15 minutes as long as the data is at least somewhat dynamic Without vehicle motion the vehicle yaw state tends to wander excessively due to the bias and noise of the MEMS gyroscopes Over a long static period the filter s position outputs would most likely diverge and become unstable Recommendations are made to combat this problem among them to conduct more characterization of the MEMS sensors and to add GPS velocity measurements as an input to the filter

Applied Mathematics in Integrated Navigation Systems Robert M. Rogers,2007

The subject of integrated navigation systems covered in this book is designed for those directly involved with the design

integration and test and evaluation of navigation systems It is assumed that the reader has a background in mathematics including calculus Integrated navigation systems are the combination of an onboard navigation solution position velocity and attitude and independent navigation data aids to navigation to update or correct navigation solutions In this book this combination is accomplished with Kalman filter algorithms *Advanced Measurement and Test X* Yanwen Wu,2010-06-07 Selected peer reviewed papers from the 2010 International Conference on Advanced Measurement and Test AMT 2010 P R China **Geomatica** ,2006 *Intelligent Information Processing for Inertial-Based Navigation Systems* Chong Shen,2021-01-04 This book introduces typical inertial devices and inertial based integrated navigation systems gyro noise suppression gyro temperature drift error modeling compensation inertial based integrated navigation systems under discontinuous observation conditions and inertial based brain integrated navigation systems Integrated navigation is the result of the development of modern navigation theory and technology The inertial navigation system has the advantages of strong autonomy high short term accuracy all day time all weather and so on And it has been applied in most integrated navigation systems Among them the information processing of inertial based integrated navigation system is the core technology Due to the effect of the device mechanism and working environment there are errors in the output information of the inertial based integrated navigation system including gyroscope noise temperature drift and discontinuous observations which will seriously reduce the accuracy and robustness of the system And the book helps readers to solve these problems The intelligent information processing technology involved is equipped with simulation verification which can be used as a reference for undergraduate graduate and Ph D students and also scientific researchers or engineers engaged in navigation related specialties **Survey Review** ,2012 Sensors, Mechatronics and Automation Seung Bok Choi,Prasad Yarlagadda,Mohammad Abdullah-Al-Wadud,2014-02-06 Selected peer reviewed papers from the 2013 International Conference on Sensors Mechatronics and Automation ICSMA 2013 December 24 25 2013 Shenzhen China **IEEE International Conference on Intelligent Transportation Systems Proceedings** ,2003 **Key Technologies in Low-Cost Integrated Vehicle Navigation Systems** Yueming Zhao,2013 A vehicle navigation system can consist of several sensors GPS INS odometers cameras etc The Micro Electrical Mechanical Sensors MEMS are cheap alternative to more expensive inertial sensors but they suffer from larger errors The MEMS stochastic errors are analysed with different methods GPS MEMS integration is introduced and navigation errors are analysed based on analytical error propagation studies and on real tests Moreover the GPS MEMS combination is augmented by map matching and camera observations of detected objects lines and points The robust BLAVE Balanced Least Absolute Value Estimator method is introduced and applied on the estimation of camera motion parameters Comparisons with the traditional RANSAC algorithm are also presented Finally the dynamic GPS MEMS error model is augmented with equivalent coloured noise model and its performance is tested on simulated data coming from multiple MEMS sensors *Performance Enhancement of MEMS*

Based INS/GPS Integration for Low Cost Navigation Applications Mark David Eberts, 2007 Experimental road test work involving a MEMS based INS were carried out over the course of this research and have validated the effectiveness of the proposed methods on several trajectories The new approaches suggested in this research in modifying the existing conventional KF modules have been proven to enhance the overall accuracy and to reduce the position errors during GPS outages The NF based nonlinear modeling of INS position errors adds further improvement to the positioning accuracy

Techniques for Integrated MEMS Sherif Sedky, 2006 This groundbreaking resource presents cutting edge post processing techniques for the monolithic integration of MEMS You learn how to select MEMS structural layers that can be processed on top of standard pre fabricated electronics and will optimize the performance and reliability of the MEMS device Supported with over 240 illustrations the book details a modular integration process that won't modify the electronics fabrication process or impose any limitation for optimizing the physical properties of the MEMS structural layers *Computer Aided Algorithms Based on Mathematics and Machine Learning for Integrated GPS and INS Land Vehicle Navigation Systems* Deepak Bhatt, 2014 An integrated navigation system consisting of INS and GPS is usually preferred due to the reduced dependency on GPS only navigator in an area prone to poor signal reception or affected by multipath The performance of the integrated system largely depends upon the quality of the Inertial Measurement Unit IMU and the integration methodology Considering the restricted use of high grade IMU and their associated price low cost IMUs are becoming the preferred choice for civilian navigation purposes MEMS based inertial sensors have made possible the development of civilian land vehicle navigation as it offers small size and low cost However these low cost inertial sensors possess high inherent sensor errors such as biases drift noises etc As a result the accuracy of the integrated system degrades rapidly in a GPS denied environment Thus an accurate in lab calibration and modeling of inertial sensor errors become mandatory before being deployed This dissertation introduces a Support Vector Regression SVR based IMU error modeling approach for improving the low cost navigation system accuracy A low cost MEMS based IMU offered by cloud cap technology Crista IMU is used to evaluate the SVR based error modeling approach effectiveness Alternatively the IMU derived navigation solution and GPS data is fused to output the more reliable navigation solution and model the errors in the inertial navigation solution simultaneously This fusion and error modeling continues during the GPS signal availability In the case of GPS outages the developed error model is utilized to improve the integrated navigation system accuracy Thus in a continued effort to improve the standalone low cost IMU derived navigation solution reliability during GPS outages an intelligent technique utilizing

neural networks and a hybrid of mathematics and support vector based fusion algorithms are proposed fusing INS and GPS data in an open and closed loop fashion. The performance of the proposed techniques and algorithm is evaluated using real field test data utilizing low cost MEMS IMU Crossbow IMU 300CC 100 and a Novatel OEM GPS receiver. The test results demonstrated the improved positioning accuracy in comparison to existing techniques and showed a substantial reduction in standalone Inertial Navigation System (INS) position error drift during GPS outages. Further, a feasibility of statistical based approaches consisting of Cubist Random Forest and Support Vector Regression is evaluated for a low cost INS and GPS integrated system. Through experimental demonstration, Random forest regression was found to be a suitable candidate for INS and GPS data fusion as it offers the least training time and ability to tune the parameter automatically.
