as programming against lists and creating custom Web Parts As such these topics are covered in Part II of the book Also you may find that as you advance in your SharePoint development you will need to incorporate either Silverlight or Web services in your SharePoint solutions Because you would likely combine these types of tasks inside of a custom Web Part list based application or event receiver these were placed in Part III of the book Beginning SharePoint 2010 Development is aimed at the developer who is new to SharePoint The book assumes you have some programming experience and a passion to learn how to develop for SharePoint But this book does not assume that you ve programmed against SharePoint before With regard to your general development background the two assumptions in this book are that you have some familiarity with Web development and you have an understanding of NET programming With regard to Web development this book assumes that you understand HTML and may have an understanding of Cascading Style Sheets CSS Extensible Markup Language Extensible Stylesheet Language XML XSL and dynamic languages such as JavaScript You may have a light understanding of ASP NET and are looking to apply this knowledge to the SharePoint space In any case you have some understanding of the fundamentals of Web and NET development and are looking to apply those to the SharePoint space

Additionally, many universities and educational institutions have their own digital libraries that provide free access to PDF books and manuals. These libraries often offer academic texts, research papers, and technical manuals,
