The Art, Science, and Technology of Medieval Travel Robert Odell Bork, Andrea Kann, 2008 This sixth volume in the AVISTA series considers medieval travel from a variety of interdisciplinary perspectives, placing the physical practice of transportation in the larger context of medieval thought about the world and its meaning. The papers included cover vehicle design and logistical management, the practicalities of how travellers oriented themselves and the symbolism of the landscapes and maps created in the Middle Ages.

A Cumulative Bibliography of Medieval Military History and Technology Kelly DeVries, 2008 This is the second update of A Cumulative Bibliography of Medieval Military History and Technology which appeared in 2002. It is meant to do two things: to present references to works on medieval military history and technology not included in the first two volumes and to present references to all books and articles published on medieval military history and technology from 2003 to 2006. These references are divided into the same categories as in the first two volumes and cover a chronological period of the same length from late antiquity to 1648 again in order to present a more complete picture of influences on and from the Middle Ages. It also continues to cover the same geographical area as the first and second volume in essence Europe and the Middle East or again influences on and from this area. The languages of these bibliographical references reflect this geography.
