

# Nutrient Cycles

(How are nutrients recycled through ecosystems?)

## WHY?

We know the importance of recycling our trash. It allows us to use something again for another purpose and prevents the loss of natural resources. But what happens to the waste in nature? Why doesn't we up to our needs in poop? Why is there always a supply of water? Why is there oxygen to breathe and carbon dioxide for photosynthesis? Organic compounds in nature are also recycled. This recycling process converts the complex organic compounds to simple, inorganic compounds which then can be returned to the nutrient cycle and be used in nature again and again.

## Model 1: The Carbon Cycle

1. Human activity adds carbon (usually in the form of  $CO_2$ ) enters the atmosphere.
2. What process uses  $CO_2$  from the atmosphere?
3. What organisms carry out that process?
