Graphics with many interesting applications There exists a powerful algorithm for shape reconstruction from arbitrary viewpoints called Space Carving However it is computationally expensive and hence can not be used with applications in the field of 3D video or CSCW as well as interactive 3D model creation Attempts have been made to achieve real time framerates using PC cluster systems While these provide enough performance they are also expensive and less flexible Approaches that use GPU hardware acceleration on single workstations achieve interactive framerates for novel view synthesis but do not provide an explicit volumetric representation of the whole scene The proposed approach shows the efforts in developing a GPU hardware accelerated framework for obtaining the volumetric photo hull of a dynamic 3D scene as seen from multiple calibrated cameras High performance is achieved by employing a shape from silhouette technique in advance to obtain a tight initial volume for Space Carving Also several speed up techniques are presented to increase efficiency Since the entire processing is done on a single PC the framework can be applied to mobile setups enabling a wide range of further applications The approach is explained using programmable vertex and fragment processors with current hardware and compared to highly optimized CPU implementations It is shown that the new approach can outperform the latter by more than one magnitude The downloadable introduction has been written specifically for this offer Its contents are only a subset of the real introductory chapter of the thesis [Reconfigurable Computing: Architectures, Tools and Applications](#) Oliver Choy,Ray Cheung,Peter Athanas,Kentaro Sano,2012-03-22 This book constitutes the refereed proceedings of the 8th International Symposium on Reconfigurable Computing Architectures Tools and Applications ARC 2012 held in Hongkong China in March 2012 The 35 revised papers presented consisting of 25 full papers and 10 poster papers were carefully reviewed and selected from 44 submissions The topics covered are applied RC design methods and tools applied RC architectures applied RC applications and critical issues in applied RC [\*\*Artificial Intelligence for Future Society\*\*](#) Vasile Palade,Margarita Favorskaya,Srikanta Patnaik,Milan Simic,Smaranda Belciug,2024-08-28 Artificial Intelligence for Future Society presents the revolution in future societies by enhancing efficiency connectivity and personalization across various sectors Its future aspects include the integration of AI in everyday life through smart cities autonomous vehicles and advanced healthcare systems providing a more intelligent responsive and adaptive environment that meets the evolving needs of humanity This volume explores the most recent innovations and significant developments in the domains of Artificial Intelligence and its impact in transforming society propelling innovation across diverse fields such as healthcare education finance and transportation It spans a wide range of dimensions including Societal Diversity Innovation in the Digital Age Business Information Systems Advancement in Healthcare HSI and Global Collaboration By merging cutting edge theoretical insights with practical applications this volume provides researchers practitioners and students with the essential knowledge and tools to explore and advance within the dynamic field of Artificial Intelligence Artificial Intelligence brings numerous benefits to society including improved efficiency and productivity in various industries through automation and intelligent
