**Reimagining the P-20 Landscape for School Leadership Learning** Bailey Watters, Jennifer Miller, Gary J. Rhone, Ron, 2024-12-20 Enhancing school leadership through innovative and effective professional learning practices is critical for improving education at all levels. By exploring new methods and pedagogical approaches, educators and leaders can better support the development of leadership skills within the P-20 community. Strengthening school leadership not only improves decision making and school outcomes but also fosters a culture of continuous improvement and student success. This focus on leadership efficacy has a lasting impact on educational quality and equity, benefiting communities and society as a whole. **Reimagining the P-20 Landscape for School Leadership Learning** provides a collection of theoretical, conceptual, and empirical research on innovative and engaging practices, methods, and pedagogy for school leadership professional learning. It seeks to improve the landscape of methods and pedagogical approaches for leadership development among the P-20 community in supporting school leaders and advancing leadership efficiency. Covering topics such as competence development, online education, and virtual reality, this book is an excellent resource for practitioners, professionals, researchers, policy advisors, and more.

**Curricular Program Implementation in the Context of Randomized Field Trials** Gloria Isabel Miller, 2011 Abstract: curricular program implementation in the context of randomized field trials. Gloria Isabel Miller This study examined three cases of commercially available curricular program implementations to determine if a unified approach to measuring the level of implementation was possible proof of concept. Further, the study investigated whether the level of curriculum and implementation plan specificity made a difference to the strength of implementation achieved in classrooms and described the implementation evolution in different contexts. The study sample consists of a total of 163 teachers in eight school districts across the United States. In each case, teachers were randomly assigned to using the curricular innovation or their currently used materials and processes. The three cases HS Math, NewScience, and MathIntervention were purposely chosen to represent three different points of curricular and implementation specificity and two different subject areas math and science. Each case features a commercially available program that also had opportunities for teachers to use electronic technology to enhance their learning or to engage their students. The cases represent differing student grade levels. The cases are different enough to provide a range that exercises the measurement techniques introduced in this study so results can begin to generalize across curricular programs and grades. However, the cases are similar enough in research design, instrumentation, and data collection methods to make them comparable. A key contribution of this investigation is the creation of a framework to measure the level of implementation the extent to which the teacher and students display the actions, behaviors, and interactions expected by using the innovation. The unified conceptual framework arrived at by using an Activity Theory perspective together with the analytical methods employed provide a way to view the rich, complex interaction of implementation as a system with the larger system of the school.

organization Data from the analysis revealed that variations in the level of implementation were no different regardless of the level of specificity A strong finding of this work is that implementation evolves slowly even when the curricular program is scripted and coaching support is provided to teachers The paper concludes with implications for policy and future research

**Psychology and Mathematics Education** Gila Hanna,Laura Macchi,Karin Binder,Laura Martignon,Katharina Loibl,2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon s bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to content free norms of coherence e g transitivity

**Twin Pandemics** Alison L. Bailey,Jose Felipe Martinez,Andreas Oranje,Molly Faulkner-Bond,2023-09-19 This book examines how the COVID 19 pandemic and racial inequities affect the educational assessment of students either separately or in combination as the health crisis was viewed as a factor intersecting with and exacerbating existing racial inequities in educational systems The four empirical papers in this book attend to the challenges of implementing virtual standardized testing during the coronavirus pandemic the different educational and assessment experiences of diverse groups of school age students and the reconsideration of traditional assessment approaches in response to mounting research evidence and growing concerns around enduring social and racial inequities faced by Black Latinx Asian Indigenous and other non white citizens and communities The four conceptual papers focus primarily on the ways in which assessment may contribute to systemic racism and offer potential solutions to move the educational assessment field forward In totality the volume offers needed empirical evidence innovative methodological approaches and theoretical and substantive examinations of the effects of the twin pandemics Twin Pandemics will be a key resource for academics researchers and advanced students of Educational Assessment Education Psychometrics Educational Research Ethnic Studies Research Methods Sociology of Education and Psychology The chapters included in this book were
