**Methods and Associated Tools for the Information Systems Life Cycle** A. A. Verrijn Stuart, T. William Olle, 1994 In the early days of methods the distinction between the process and the product was unclear. Sometimes consideration was concentrated on the problems of what models should be formulated at other times on how such results were to be achieved. The methods and tools as the two factors became known enjoyed increasing attention over the years though emphasis now as then is almost always placed on the outcome rather than on the ways towards it. This publication explores methods and associated tools in the perspective of the information systems life cycle. It discusses the need for method flexibility within a design base of certain strict standards and with respect given to the potential harmonization of existing methods. The contribution of a broad range of specialists ensures that papers extend across the various facets of the discipline

How to Build Shlaer-Mellor Object Models Leon Starr, 1996 This book shows you how to build object information models that resolve complex subtle and conflicting application requirements lead to simplified state and process models and can be translated into a reliable implementation. Plus practical advice on how to write useful model descriptions how to get the most out of binary reflexive associative and supertype relationships and how to compare different model solutions of the same problem and pick the best one
