Chapters provide recommended management plans for specific conditions such as HIV and neuropraxia following regional anaesthesia and include algorithms to guide clinical decision making. Experts in their fields have contributed sections including allergy testing and immunology, the immunocompromised parturient and maternal collapse. This practical resource will serve as a survival guide for all those caring for parturients on the delivery suite. Principles and Practice of Obstetric Anaesthesia A. Holdcroft, T. Thomas, 2000-01-10.

Obstetric anaesthesia is a specialized practice and covers the entire range of pain relief throughout normal labor as well as general anaesthesia for special procedures such as caesarian section. While there is a specialist group based at main teaching centers who practice obstetric anaesthesia exclusively, the majority of anaesthetists are based at smaller hospitals where there is no such specialist. Consequently, it is essential that all anaesthetists are familiar with the anaesthetic requirements of normal labor and of all but the most extreme cases of abnormal labor. While this book is written for the specialist in obstetric anaesthesia, it is also ideal for trainee anaesthetists. It provides enough information for the final FRCA examination but also contains sufficient detail on the various clinical problems that may present at any stage in their future career. The underlying principle is that the anaesthetist must understand the physiology of labor in normal and abnormal situations as well as the interventions of his obstetric colleagues in order to practice safely and effectively. The book will replace J. Selwyn Crawford's text which presented a personal view backed by his extensive research experience of obstetric anaesthesia. Anaesthesia for Obstetrics and Gynaecology Robin Russell, 2000-02-16.

This latest contribution to the FAAM series provides a comprehensive and up to date discussion of anaesthetic management in pregnancy during delivery and in patients undergoing gynaecological surgery. With authoritative contributions from international experts, it is a practical reference for all anaesthetists and specialist clinicians. Analgesia, Anaesthesia and Pregnancy Róisín Monteiro, Marwa Salman, Steve Yentis, Surbhi Malhotra, 2019-05-02.

The fourth edition of Analgesia, Anaesthesia and Pregnancy remains an essential practical guide to obstetric anaesthesia and analgesia.

Regional Analgesia in Obstetrics Felicity Reynolds, 2000-06-23. Regional Analgesia in Obstetrics provides an account of the developments in the provision of regional analgesia and anaesthesia in obstetrics over the last decade. The book covers the attitudes to obstetric analgesia in different countries, the indications for regional analgesia in labour, the effects of regional analgesia on outcome and operative delivery. Obstetric Decision-Making Simulation Kirsty MacLennan, Catherine Robinson, 2019-03-28. A practical guide to decision making and establishing simulation training within a multidisciplinary obstetric team.

Textbook of Obstetric Anaesthesia Rachel E. Collis, Felicity Plaat, John Urquhart, 2002 The modern obstetric anaesthetist must not only provide safe and effective pain relief in labour and anaesthesia for Caesarean section but also understand the wider role of the anaesthetist in the management of the pregnant woman. Textbook of Obstetric Anaesthesia provides information on the breadth of obstetric anaesthesia and the role of the obstetric anaesthetist in the delivery suite. It provides useful practical evidence based information on all aspects of labour ward management. Coverage of all subject areas is comprehensive and a multidisciplinary group of expert contributors examine the key issues in normal labour and routine analgesia, routine fetal monitoring and basic interpretation of the CTG. Later chapters go on to cover in detail what happens and how to manage patients in difficult situations that extend beyond the routine.

Principles and Practice of Obstetric Anaesthesia Jeffrey Selwyn Crawford, 1959

Obstetric Anaesthesia and Analgesia Donald D. Moir, John Thorburn, Martin J. Whittle, 1986

Step by Step Anaesthesia in Obstetrics and Gynaecology Vinay Tewari, 2006 The pregnant patient presents a unique two in one situation for the anaesthesiologist what happens to the mother has a bearing on her unborn child and the foetus produces many physiological changes in the mother which have important anaesthetic implications. Considerations unique to the pregnant state are dealt with the potential problems to be faced and the various solutions to those issues.
