Theorizing Ocean Governance: A Framework Combining Governance, Science, and Law Lena Schøning, 2024-10-14 Ocean governance is emerging as a field of study drawing on and combining different knowledge domains including governance science and law Assumptions of these three knowledge domains and their relationships are rarely discussed This study attempts to contribute to such discussion by theory building investigating the governance science and governance law interfaces in an ocean governance context The investigations form the basis for offering some perspectives concerning key topics of ocean governance cross sectoral holistic and integrated approaches science based decision making adaptation the ecosystem approach and ocean governance as an emerging field of study

Ecosystem-Based Management for the Oceans Karen McLeod, Heather Leslie, 2012-09-26 Conventional management approaches cannot meet the challenges faced by ocean and coastal ecosystems today Consequently national and international bodies have called for a shift toward more comprehensive ecosystem based marine management Synthesizing a vast amount of current knowledge Ecosystem Based Management for the Oceans is a comprehensive guide to utilizing this promising new approach At its core ecosystem based management EBM is about acknowledging connections Instead of focusing on the impacts of single activities on the delivery of individual ecosystem services EBM focuses on the array of services that we receive from marine systems the interactive and cumulative effects of multiple human activities on these coupled ecological and social systems and the importance of working towards common goals across sectors Ecosystem Based Management for the Oceans provides a conceptual framework for students and professionals who want to understand and utilize this powerful approach And it employs case studies that draw on the experiences of EBM practitioners to demonstrate how EBM principles can be applied to real world problems The book emphasizes the importance of understanding the factors that contribute to social and ecological resilience the extent to which a system can maintain its structure function and identity in the face of disturbance Utilizing the resilience framework professionals can better predict how systems will respond to a variety of disturbances as well as to a range of management alternatives Ecosystem Based Management for the Oceans presents the latest science of resilience while it provides tools for the design and implementation of responsive EBM solutions

Coastal and Marine Geospatial Technologies D.R. Green, 2010-03-11 In 2005 the CoastGIS symposium and exhibition was once again held in Aberdeen Scotland in the UK the second time that we have had the privilege host this international event in the city of Aberdeen This was the 6th International Symposium Computer Mapping and GIS for Coastal Zone Management a collaboration between the International Cartographic Association's ICA Commission on Marine Cartography and the International Geographical Union's IGU Commission on Coastal Systems The theme for 2005 was Defining and Building a Marine and Coastal Spatial Data Infrastructure As a major coastal event the CoastGIS series of conferences always attracts an international audience of coastal researchers managers and practitioners who use one or more of the geospatial technologies e.g. GIS GPS digital

mapping remote sensing databases and the Internet in their work The CoastGIS series is fundamentally an international event which over the years has gained a strong following attracting delegates from around the globe Hosted by the University of Aberdeen at the Aberdeen Exhibition and Conference Centre AECC once again CoastGIS 2005 provided an opportunity to communicate the results of a wide range of innovative scientific research into coastal and marine applications of the geospatial technologies including remote sensing Geographical Information Systems GIS Global Positioning Systems GPS databases data models the Internet and online mapping systems

Adaptive Governance D. G. Webster, 2009 Develops and applies an innovative theoretical framework that links domestic economic vulnerabilities to national policy positions and international management in the context of Atlantic fisheries The rapid expansion of the fishing industry in the last century has raised major concerns over the long term viability of many fish species International fisheries organizations have failed to prevent the overfishing of many stocks but succeeded in curtailing harvests for some key fisheries In Adaptive Governance D G Webster proposes a new perspective to improve our understanding of both success and failure in international resource regimes She develops a theoretical approach the vulnerability response framework which can increase understanding of countries positions on the management of international fisheries based on linkages between domestic vulnerabilities and national policy positions Vulnerability mainly economic in this context acts as an indicator for domestic susceptibility to the increasing competition associated with open access and related stock declines Because of this relationship vulnerability can also be used to trace the trajectory of nations positions on fisheries management as they seek political alternatives to economic problems Webster tests this framework by using it to predict national positions for eight cases drawn from the International Commission for the Conservation of Atlantic Tunas ICCAT These studies reveal that there is considerable variance in the management measures ICCAT has adopted both between different species and in dealing with the same species over time and that much of this variance can be traced to vulnerability response behavior Little attention has been paid to the ways in which international regimes change over time Webster's innovative approach illuminates the pressures for change that are generated by economic competition and overexploitation in Atlantic fisheries Her work also identifies patterns of adaptive governance as national responses to such pressures culminate in patterns of change in international management

The Green Years, 1964-1976 Gregg Coodley, David Sarasohn, 2021-09-30 In The Green Years 1964 1976 Gregg Coodley and David Sarasohn offer the first comprehensive history of the period when the United States created the legislative legal and administrative structures for environmental protection that are still in place over fifty years later Coodley and Sarasohn tell a dramatic story of cultural change grassroots activism and political leadership that led to the passage of a host of laws attacking pollution under President Johnson At the same time with Stewart Udall as secretary of the interior the Wilderness Act the Wild and Scenic Rivers Act and other land protection measures were passed and the department shifted its focus

from western resource development to broader national conservation issues The magnitude of what was accomplished was without precedent even under conservation minded presidents like the two Roosevelts The fast paced story the authors tell is not only about the Democratic Party in this era there was still a vital Republican conservation tradition In the 1960s Republicans were chronologically as close to Teddy Roosevelt as to Donald Trump In both the House and Senate and in the Nixon and Ford administrations Republicans played vital roles It was President Nixon who established the Environmental Protection Agency and signed into law the 1970 Clean Air Act revisions in 1972 to the Clean Water Act and the 1973 Endangered Species Act Under Nixon actions were taken to protect the oceans forests coastal zones and grasslands while regulating chemicals pesticides and garbage The authors analyze the full range of transformations during the Green Years from the creation of entirely new pollution control industries to backpacking becoming mass recreation to how revelations about chemical exposure spurred the natural food movement And not least the tectonic shift in the political landscape of the United States with the western states becoming Republican bastions and centers of ongoing backlash against the federal government The Green Years 1964 1976 is the story of environmental progress in the midst of war and civil unrest and of the lessons we can learn for our future

Whaling Diplomacy Alexander Gillespie, 2005 Whaling Diplomacy is the only book that addresses all of the substantive issues relating to the conservation of whales through the International Whaling Commission IWC It covers the law policy science and philosophy at the heart of each element of the debate discussing how it has developed the current problems that beset it and what is necessary for the future Together all of the issues involved in whaling form a single crucible through which the future of conservation in international environmental law is being debated Students of law politics environmental economics and philosophy will find this book of great value for its cutting edge relevance over the three disciplines Policymakers will also find it of interest for the insight into one of the most controversial conservation debates of our time

historical survey informs the remainder of the work which then looks at the legal framework of the right of visit contemporary challenges to the traditional right interference on the high seas for the maintenance of international peace and security interferences to maintain the bon usage of the oceans navigation and fishing piracy j ure gentium and current counter piracy operations off the coast of Somalia the problems posed by illegal unregulated and unreported fishing interdiction operations to counter drug and people trafficking and recent interception operations in the Mediterranean Sea organised by FRONTEX
