THREE PROJECTS: Sentiment Analysis and Prediction Using Machine Learning and Deep Learning with Python GUI Vivian Siahaan, Rismon Hasiholan Sianipar, 2022-03-21 PROJECT 1 TEXT PROCESSING AND SENTIMENT ANALYSIS USING MACHINE LEARNING AND DEEP LEARNING WITH PYTHON GUI Twitter data used in this project was scraped from February of 2015 and contributors were asked to first classify positive negative and neutral tweets followed by categorizing negative reasons such as late flight or rude service This data was originally posted by Crowdfunder last February and includes tweets about 6 major US airlines Additionally Crowdfunder had their workers extract the sentiment from the tweet as well as what the passenger was dissatisfied about if the tweet was negative The information of main attributes for this project are as follows airline_sentiment Sentiment classification positive neutral and negative negative reason Reason selected for the negative opinion airline Name of 6 US Airlines Delta United Southwest US Airways Virgin America American and text Customer's opinion The models used in this project are K Nearest Neighbor Random Forest Naive Bayes Logistic Regression Decision Tree Support Vector Machine Adaboost LGBM classifier Gradient Boosting and XGB classifier and LSTM Three vectorizers used in machine learning are Hashing Vectorizer Count Vectorizer and TFIDF Vectorizer Finally you will develop a GUI using PyQt5 to plot cross validation score predicted values versus true values confusion matrix learning curve performance of the model scalability of the model training loss and training accuracy PROJECT 2 HOTEL REVIEW SENTIMENT ANALYSIS USING MACHINE LEARNING AND DEEP LEARNING WITH PYTHON GUI The data used in this project is the data published by Anurag Sharma about hotel reviews that were given by customers The data is given in two files a train and test The train csv is the training data containing

unique User_ID for each entry with the review entered by a customer and the browser and device used. The target variable is Is_Response, a variable that states whether the customer was happy or not happy while staying in the hotel. This type of variable makes the project a classification problem. The test csv is the testing data, containing similar headings as the train data, without the target variable. The models used in this project are K Nearest Neighbor, Random Forest, Naive Bayes, Logistic Regression, Decision Tree, Support Vector Machine, Adaboost, LGBM classifier, Gradient Boosting, and XGB classifier, and LSTM. Three vectorizers used in machine learning are Hashing Vectorizer, Count Vectorizer, and TFIDF Vectorizer. Finally, you will develop a GUI using PyQt5 to plot cross-validation score, predicted values versus true values, confusion matrix, learning curve, performance of the model, scalability of the model, training loss, and training accuracy.

PROJECT 3: STUDENT ACADEMIC PERFORMANCE ANALYSIS AND PREDICTION USING MACHINE LEARNING WITH PYTHON GUI

The dataset used in this project consists of student achievement in secondary education of two Portuguese schools. The data attributes include student grades, demographic, social, and school-related features, and it was collected by using school reports and questionnaires. Two datasets are provided regarding the performance in two distinct subjects: Mathematics (mat) and Portuguese language (por). In the two datasets, we modeled under binary, five-level classification, and regression tasks.

Important note: the target attribute G3 has a strong correlation with attributes G2 and G1. This occurs because G3 is the final year grade issued at the 3rd period, while G1 and G2 correspond to the 1st and 2nd period grades. It is more difficult to predict G3 without G2 and G1, but such prediction is much more useful.

Attributes in the dataset are as follows:

- school: student's school, binary: GP (Gabriel Pereira) or MS (Mousinho da Silveira)
- sex: student's sex, binary: F (female) or M (male)
- age: student's age, numeric, from 15 to 22
- address: student's home address type, binary: U (urban) or R (rural)
- famsize: family size, binary: LE3 (less or equal to 3) or GT3 (greater than 3)
- Pstatus: parent's cohabitation status, binary: T (living together) or A (apart)
- Medu: mother's education, numeric, 0 (none), 1 (primary education, 4th grade), 2 (5th to 9th grade), 3 (secondary education), or 4 (higher education)
- Fedu: father's education, numeric, 0 (none), 1 (primary education, 4th grade), 2 (5th to 9th grade), 3 (secondary education), or 4 (higher education)
- Mjob: mother's job, nominal, teacher, health care, related civil services, e.g. administrative or police, at home, or other
- Fjob: father's job, nominal, teacher, health care, related civil services, e.g. administrative or police, at home, or other
- reason: reason to choose this school, nominal, close to home, school reputation, course preference, or other
- guardian: student's guardian, nominal, mother, father, or other
- traveltime: home to school travel time, numeric, 1 (1 hour), 2 (1-10 hours)
- studytime: weekly study time, numeric, 1 (1-10 hours), 2 (10-20 hours)
- failures: number of past class failures, numeric, n if 1
