Normative Data Northwest Evaluation Association, 2017 Having the right data is a key component of individualizing instruction for each child The Northwest Evaluation Association NWEA has the ability to measure a student's achievement and academic growth independent of grade across time From the insight provided with Measures of Academic Progress MAP and its reports educators can compare class or grade level performance to students from a wide variety of schools across the country Status norms provide a starting point for educators to review data and help them gain an understanding of each child's current academic level where they need focused instruction and the extent of their progress The 2011 NWEA RIT Scale Norms Study provides growth and status norms for all five RIT scales Reading Language Usage Mathematics General Science and Science Concepts and Processes

[NWEA FAQ](#) Northwest Evaluation Association, 2015 Northwest Evaluation Association NWEA conducts norming studies every several years to provide the best and most up to date information we can about student achievement and growth to better support educational decision making It is an important part of our commitment to our partners The most recent NWEA norms were released in July 2015 Just as we expect student performance to change with time norms of student performance will change correspondingly For 2015 several factors may have influenced

how the US school age population performed on Measures of Academic Progress MAP assessments of language usage mathematics and reading over the 2011 12 2012 13 and 2013 14 school years Prominent among these possible factors are the introduction of Common Core instruction and Common Core versions of MAP But as with all empirical studies changes in scope and data necessitated changes in statistical design and analyses The methodological improvements introduced in the 2015 norms have resulted in a set of norms that are more representative of the US school age population than previous NWEA norms Methodological changes involved differences in the way post stratification weights were developed and the way growth was modeled Details of these changes are addressed more thoroughly in the 2015 Norms Study As a result of the improved methodology partners can expect some differences from previous norms as explained below
